# Decentralized and Distributed Systems (IFIP Transactions A: Computer Science and Technology)

[continue reading](#)

Decentralized and distributed systems possess a drastic impact on everyday life since they constitute the key of cooperation and integration of large organizations and companies. Distributed management of info and the ability to take regional decisions or even to perform local treatments, allow more versatility and power. This publication is certainly devoted to the study of advancements in the field. This raises many challenges and open problems, resulting in new ideas, principles and methods supported by new technologies. The papers, sourced from a broad range of worldwide contributors, cover a broad spectrum of specific topics, including: distributed algorithms, models, efficiency evaluation, interconnect, design methods and parallel simulation.
