Decentralized Systems: Proceedings of the Ifip Wg 10.3 Working
Conference on Decentralized Systems, Lyon, France, 11-13 December,
1989

[continue reading](#)

Decentralized systems have an increasing impact because they're the main element to cooperation and even integration of large organizations and companies. The papers in this book cover a range of topics including: Communication Networks, Distributed OS'S, Object and Actor Oriented Systems, Logic Programming, Theoretical Models and Evaluation, Parallel and Distributed Algorithms, Methodology of Parallelization, Scheduling and Load Balancing, and Performance Evaluation. The resulting difficulties and problems are resulting in new ideas, concepts and strategies. The increasing demands for computation, related distributed info and reliability have overtaken single machines, forcing the usage of interconnected ones.
