**Decentralized Energy Access and the Millenium  
Development Goals: An Analysis of the Development of  
Benefits of Microhydropower in Rural Nepal**

[continue reading](#)

Decentralized, off-grid power supplies such as for example micro-hydropower can be perceived as expensive investments by poor countries like Nepal. Indicators associated with income, education, gender equality, maternal and kid health and environmental effect were measured in villages benefiting from micro-hydropower, compared with neighboring villages lacking any electricity supply. This publication describes research into the development gains taken to such villages, measured when it comes to progress towards reaching the millennium advancement goals. Can these investments end up being justified by the huge benefits that electricity brings to villages in remote control mountainous regions? Where businesses that exploited the new energy supply have been began, the income benefits were even more marked. The household income benefits and cost savings connected with an electricity supply were found to become considerable, also to outweigh the expenditure costs of micro-hydropower over the duration of an set up. The cumulative advancement advantages were found to far outweigh the investment costs of a micro-hydropower system. In addition, there were other significant advancement benefits when it comes to education, gender equality and wellness. Decentralized Energy Gain access to and the Millennium Advancement Goals provides conclusive proof these transformative benefits and recommends that Nepal, and countries like it, scale up investments in the micro-hydropower program.
