This book focuses on recent technical advancements and state-of-the-art technologies for analyzing characteristic features and probabilistic modelling of complex social networks and decentralized online network architectures. Such research results in applications related to surveillance and privacy, fraud analysis, cyber forensics, propaganda campaigns, as well as for online networks such as Facebook. The written text illustrates the benefits of using advanced social network analysis methods through program case studies based on practical test outcomes from artificial and real-world data. This book will appeal to experts and students employed in these areas.
