Decentralized Public Healthcare in Uganda: Moving towards improved local service delivery?

[continue reading](#)

For the last two decades Uganda embraced many political, economic and plan reforms to revamp her collapsed overall economy. Through a decentralised healthcare system, many actors possess entered into the health care delivery businesses with a number of service provision mechanisms, passions and anticipations. Decentralisation in the health care sector was particularly adopted to improve management efficiency and effectiveness, increase local representation and community responsibility, to strengthen financial efficiency through improved revenue era and rational expenditure decisions, facilitate the provision of open public goods and services more efficiently among others. One of these provides been decentralisation as is usually enshrined in her 1995 National Constitution and the 1997 LGA. It has benefited the healthcare sector. That resulted in the emergence of various challenges, which call for serious attention, if increases in size made are not to end up being eroded and render Ugandan struggling to attain its health-related MDG targets by 2015. However, many problems that existed in the centrally-controlled healthcare system have either re-surfaced or been exacerbated, despite deliberate initiatives to tackle them.
