Secure and Smart Internet of Things (IoT): Using Blockchain and AI (River Publishers Series in Information Science and Technology)

By 2020, professionals forecast that up to 28 billion devices will get in touch to the Internet with only one third of them being computer systems, smartphones and tablets. The rest of the two thirds will become other "devices"--sensors, terminals, household appliances, thermostats, televisions, automobiles, production machinery, urban infrastructure and several other "things"--which traditionally have not been Internet allowed. It really is transforming our lifestyle, business and everything in between. The topics discussed in the reserve include:- Internet of Factors (IoT)- Industrial Internet of Issues (IIoT)- Fog Computing- Artificial Cleverness- Blockchain Technology- Network Protection- Zero-Trust Model- Data Analytics- Digital Transformation- DDoS- Smart Devices In a nutshell, the web of Things (IoT) is the convergence of linking people, things, data and procedures. This "Internet of Points" (IoT) represents an extraordinary transformation of the way in which our world will soon interact. Secure and Wise Internet of Factors explores many aspects of the Internet of Issues and explains many of the completed principles of IoT and the new advances in IoT like the use of Fog Computing, AI, and Blockchain technology. Similar to the INTERNET connected computers to systems, and the next evolution connected people to the Internet and other people, IoT appears poised to interconnect gadgets, people, environments, virtual objects and machines in ways that only research fiction writers could have imagined.
