In scanning this book, there are fundamental themes that are constant like the notion of identity and identity sets; e-sovereignty and privacy & most importantly the function of an Internet that is inclusive, not "controlled" by a few agencies for their own profitability. What is e-Sovereignty and its own application continue if we posit that the establishments that exist today may indeed no longer be relevant within their current structure? Personal privacy, security, and the management of your digital footprint should be completed by you. These tenets may audio libertarian, but in fact, we are speaking about core principles to guide the development as well as perhaps the come back of the Internet to the people, especially those people who are underserved."Do No Evil" should not be a organization motto but rather foundational to the advancement of any technologies that do effect us as individual consumers of the technologies and corresponding items. The Humanized Internet is usually therefore a proactive approach, your action. Yes, this is actually the Humanized Internet. With the progression of Human being and Machine interaction due to developments in Biotech and Mind/Computer User interface Cloud, Virtual and Mixed Truth, we have to understand the influence of these technologies to identity overall. Do we need a new definition of identification? Certainly, "enterprising" the web has been a process over these previous years, and there is no intent to create judgement here but instead pause for an instant and reflect on the impact of these technologies to individuals. We've read about the abuses whenever your data falls in to the hands of other entities, intentionally or not. Indeed there is a polarity between an Internet that is used for mass empowerment and one which may be used for mass destruction. Contributors to the book include: Ann Greenberg, Entertainment AI, USA Daniel Gasteiger and Adithya Kumar, Procivis, Switzerland Frances Hughes, The University of Sydney, Australia
