Cryptocurrency and Blockchains outlines many of the key developments in building a more trustworthy world. An important part of the reserve is to look forward to a global where every deal is made more trustworthy, and where privacy requirements are respected. In discussing cryptocurrency, the book outlines the trust infrastructure within the main cryptocurrency methods and around using electronic tokens to transfer credits. This includes a debate of a variety of program areas including healthcare, law, finance and federal government services, and how sensible contracts may be used to make transactions more reliable. It includes a background within the primary methods found in creating data infrastructure which use Blockchain strategies, and how these changes existing methods of authentication and identity provision. Topics include: cryptocurrency, blockchain, electronic tokens, trustworthy transactions, personal privacy, authentication and identity provision
