After a highly successful career on Wall Road, in the first 1990s Jack Perkowski needed a new challenge.

Controlling the Dragon can be a revealing and thought-provoking memoir supplying a refreshing perspective on a nation at the dawn of a new age. In a short time, Jack setup ASIMCO, a manufacturing business specializing in car components, which right now comes with an annual turnover of over \$500 million. This might explain why the country has, nearly single-handedly, placed the whole planet in a cost / price squeeze. For example, we see how China's overall economy and government are highly decentralized and the way the country will operate like a group of villages spread across a vast landscape; we discover how much influence 'the Party' has on the banks, and how economic incentives at municipality level causes China to create overcapacity in just about any market. In Managing the Dragon Jack provides an insider's view of China, its many peculiarities and working practices. Having decided that China will be the future, he go about investigating this little-known market and the business possibilities it provided. Through its colourful narrative it also tells the tale of one of the very most influential and pioneering business owners of today.
