Bitcoin Supernova: How Electronic Currencies Will Dominate And Reshape Global Society

[continue reading](#)

This brand new essay by journalist David Seaman ("Banks do not help the poor.") outlines the newest developments in the Bitcoin overall economy and lays out a scenario where fast global adoption of cryptocurrency in 2014 and early 2015 will cause dramatic shifts in establishment financial power. A dream become a reality: technological revolution via an app, from the convenience of home, without the violence and harmful feelings that typically have a changing of the guard. Used by anyone, managed by no-one, benefiting everyone. Banking institutions don't see their eventual success as mathematically assured. Right now, you and me. Some of my podcast listeners ask me personally why I am interested in Bitcoin more than political tales or corporate corruption lately. Area of the cause why is that many of these complications - institutional corruption, entrenched politics, etc - these problems will start to disappear as digital currency adoption increases! Bitcoin is the slacktivist's friend. The near future is now. We are living later on. And unlike prior revolutions, this one's here. But we are also getting the good, finally: globally decentralized electronic currencies, trust-free, counterfeit-free, source limited by design. Systems that benefit all their individuals are adopted as time passes, out of necessity. Consider: Bitcoin is an antidote to parasitic banking institutions, who have become only multinational middle men, archaic fee mongers. The Bitcoin Primer

"Banks usually do not help the American middle income. Yes, we got a few of the bad issues that come with the future: nuclear power plant meltdowns, terrorism, Predator drones, widespread digital surveillance. On a smaller sized scale, the money problems that Bitcoin solves for corporations it solves for individuals: we wish our cash to be concurrently secure and yet absolute to move anywhere, which really is a tall order to fill. In fact, I believe large companies and governments (or what we will look at a government in 20 years) will be a few of the largest users of electronic currency. Within 21st century capitalistic enterprise, companies crave both a security of capital saved and a liquidity of capital. They had a need to acquire or maintain - both qualities are an issue within today's financial system. It even helps additional large corporations. That is a component of the reason why the problems Bitcoin solves couldn't end up being tackled until the minute of its creation.
