Peering Carrier Ethernet Networks

Peering Carrier Ethernet Networks begins by providing background information upon the evolution of essential concepts and blocks that have resulted in the current state of high bandwidth and powerful Ethernet technology in order to support current and emerging customer applications. The background information covered includes a synopsis of Public Switched Phone Networks (PSTN) to describe circuit switching, multiplexing, and voice digitization that result in the advancement of T1/T3 and SONET/SDH for transportation.Presents detailed insurance of end-to-end providers across wide region data networksConsolidates, in a single ready reference, the most recent applied study in this rapidly evolving fieldProvides the context, advantages, and industry specifications for peering Carrier Ethernet systems The publication concludes by describing next actions in Ethernet technology to meet growing needs and emerging trends. Additional insurance includes Carrier Ethernet systems' technical requirements, which describe how service providers can provide services to off-net customers using peered Carrier Ethernet systems and a description of the taxonomy of clients and their current and emerging applications at Layer 2 and Layer 3 on peered Carrier Ethernet systems. It interweaves these advancements with adjustments in the regulatory regime.
