A Quick Instruction to Bitcoin Security
Securing your Bitcoins from Theft and Hacking
If you possess, or are planning of owning, Bitcoin, or any other digital currency, then your security of those coins is vitally important! Why is protection important? This publication outlines how to secure your Bitcoins with all the following storage methods: Desktop Wallets, Portable Wallets, Online Wallets, Hardware Wallets, Trezor Hardware Wallet, Ledger USB Wallets and Paper Wallets. It is a must for all Bitcoin owners or potential investors... Consequently, if the brand new user will not take the precaution of learning, step-by-step, how to secure wallets, and therefore secure their coins, they do run the very real possibility of losing their investment by building simple, yet easily avoidable, mistakes. History demonstrates Bitcoins have already been stolen and Bitcoins, if not cared for, can quite easily be lost. A major problem for those new to bitcoin is their need to make a radical, and frequently uncomfortable mind shift, by taking full, and personal, responsibility for their digital cash.
