

Abstract. A crypto-currency based on Bitcoin, the work of Nakamoto, with various improvements such as a two-tier incentive network, known as the Masternode network. Included are improvements such as Darksend, for increasing fungibility and privacy, which allows instant transaction confirmation without a centralized authority.

createmasternode

A ScriptPubKey SPS, which will receive the coins in the other chain

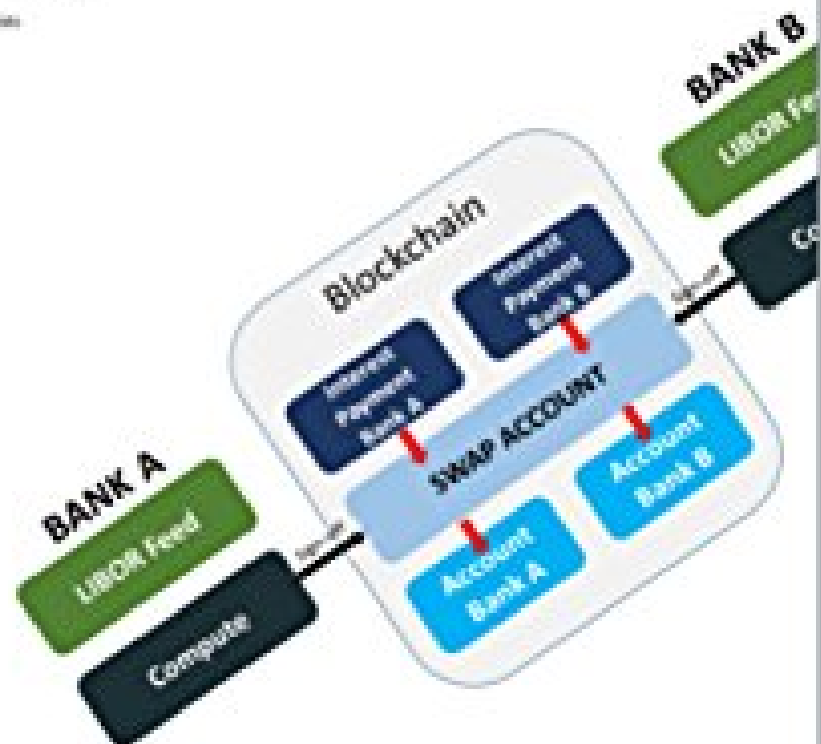

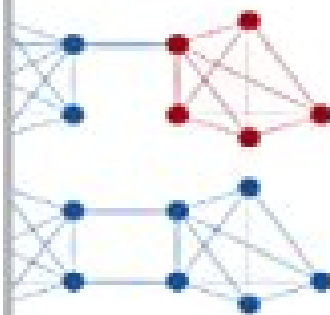

$P(C_{out})$ of the transaction's public points

scriptPubKey scriptPubKey describing the functionality requirements

SP address

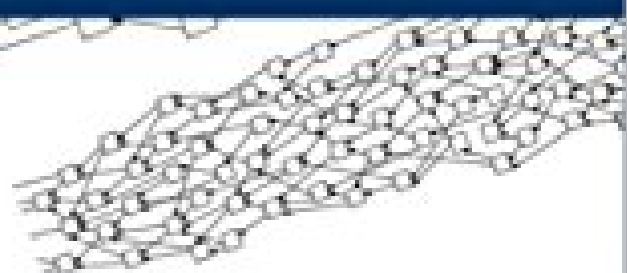

A seed for this instance
