The powers-that-be have made it clear that they want digital money to supersede cryptocurrencies. It is not, however, entirely one-sided. Your life will be open for authorities, bureaucrats and certain personal forces to scrutinize as they wish. Central lender profit a crypto guise, allows banking institutions and governments to track every part of a person. This revolution will continue above-ground, or also underground, if central banks try to quit it. He examines a reduction in the public power of patents and copyrights that only benefits the largest corporations. He talks about a return to private, non-governmental justice and free-market Austrian economics. Effect of blockchain disruption and the private monetary benefits of cryptocurrencies. Above all, David discusses the liberating electronic. He advocates a continued expansion of microstates and secession where feasible. There are many forces pushing back again against government and central banking control of money. Some way it'll evolve as people continue to make such cryptocurrencies harder to identify and trace. This publication clarifies why and how using the most up-to-date examples.
