First contact with Deep Learning: Practical introduction with Keras (WATCH THIS SPACE collection – Barcelona Book 5)

Artificial Intelligence is normally changing our lives, and solutions predicated on Deep Learning are leading this transformation.During the past, many experts and companies regretted not thinking about their Internet strategy earlier;cnica de Cataluna – Many enthusiastic professionals in the field of Deep Learning have troubles establishing a starting point and breaking into this region of advancement, given the enormous amount of resources available today and the complexity of the field. So now is a good time to start defining your line of action in this field and I hope this book goes a way to obtain started on the subject. I am hoping your company isn't one of these."First Connection with Deep Learning – Practical introduction with Keras" can be an introductory work, designed to support my teaching at the Universitat PolitèBut getting started in this technology is not an easy task. Barcelona Tech and subsequently to help engineers who have left the classrooms and so are working, but want to start on their own in this brand-new disruptive technology to assess its possibilities and applications. Deep Learning is currently of major curiosity to private companies, because it can be applied to many areas of activity. I think that in a couple of years from now the same will end up being true of Artificial Intelligence, as it is an even greater paradigm change. Using the Keras library enables the advancement of Deep Learning versions and abstracts a lot of the mathematical complexity involved with its implementation.The purpose of this book is to gradually start the reader off in this exciting world, in a practical way with the Python vocabulary.
