Blockchain for the Greater Good

[continue reading](#)

The emergence of blockchain enables the advancement of novel tools for social innovation. The application of these evolving equipment to improve the greater good is an area of growing curiosity. Frontiers, the globe are getting reexamined and the assumptions behind these experiments—We live in a period when virtually every aspect of the status quo has been questioned. Our prevailing social, political, and economic establishments— For the inaugural concern, we invite you to submit manuscripts for review on the topic of Inclusive Stakeholding.s leading peer-reviewed open-access journal, offers launched Frontiers in Blockchain with a section on Blockchain once and for all to market scholarship in this exciting and important region of work. Discussed features will include the way the model instantiates alignment of passions and objective congruence among stakeholders while reducing conflicts of curiosity and perverse incentives. Certainly, as Harvard evolutionary biologist Joseph Henrich notes in *The Secret of Our Success*, all prosocial institutions as time passes collapse at the hands of self-interest.s success is a function of the success of others, innate pursuit of self-interest could yield win-gain outcomes for individuals while promoting greater great. Human beings are wired to pursue self-interest, but in the context of evolutionary dislocations, asymmetries, and irrationalities among actors, the quest for self-interest translates to a reality other than a great culture. Each paper should select a specific case of a system that behaves dysfunctionally because of perverse incentives or significant misalignment of interests among stakeholders (examples: medical health insurance, property contractors, politicians). The paper should discuss how a blockchain-based solution using vested curiosity in the success of other stakeholders and objective congruence can optimize system behaviors. The papers also needs to specifically describe how stakeholders benefit, including those that don't contain the token. By re-imagining incentive systems such that an individual'Submitted functions should envision blockchain-structured token financial models that embody inclusive stakeholding, integrating the quest for self-interest with a contractually defined (example: wise contracts) vested interest in the success of other stakeholders.
