Trading and the financial system decentralization: Crypto currency

[continue reading](#)

Since 2009, cryptocurrencies have changed the rules of the global monetary game. A decade ago, the problem, exchange, and use of digital money without the intervention of a centralized lender was a dream for the financial market. That dream came true faster than anyone could have predicted. Cryptocurrencies are digital currencies operating as a decentralized network, using cryptography for protection, and a general public ledger (the Blockchain) to record all transactions. Cryptography is an encryption technique that uses advanced techniques to verify and secure transactions, the Blockchain identifies a database that records all coin transfers. The global penetration of the World Wide Web functions as an accelerator to the acceptance of every new technology that aims to serve the emerging needs of people. This is the ultimate goal of each technology, to better meet the needs of individuals, and nothing else matters.
