## Smart Contracts in Blockchain

[continue reading](#)

One of the most special features of blockchain is decentralization—that is, it is with the capacity of being shared among all entities of the blockchain network, so removing the participation of third-party intermediaries or middlemen or alternative party. Due to this fact, actually governmental agencies and corporate finance institutions are now shifting to the blockchain. While the blockchain technology is not perfect within their entirety, they offer quicker, inexpensive and far better opportunities in comparison to traditional banking systems. This feature is principally beneficial because it retains you from the likelihoods of any process conflict although it is timesaving as well.
