Don't be misled. As an adult, I can relate with many topics discussed in the reserve... I learned about this publication from a proven Master Herbalist with years of clinical (pure plant based protocols) encounter helping people heal themselves, including me. If for no other cause, read this book to safeguard children. Dr. Mendelsohn's function was relevant then and remains so now (2015). Nutritionists/dieticians can't say that clean meals will reverse disease, but they can say it could prevent certain diseases. begin reading a book online until it's delivered. The initial few chapters illustrate this point: 1: THE MAJORITY OF THINGS Get Better By Morning, 3: How Doctors Can Make Healthy Kids Sick, 4: Protecting Your Children Before They Are Born (ought to be integrated into high school science, health insurance and phys ed classes and after school programs for teenagers, with parental consent) and 5: Proper Diet For HEALTH INSURANCE AND Growth.. Throughout a physical a couple of years ago, which was my last "routine examination" because I realized they were unnecessary, a nurse attempted to hustle me into purchasing vaccines. Perfect book for each and every parent. There is a price to pay for blindly volunteering to be part of a test with harmful consequences (Rx usage, x-rays/scans, "exploratory" surgery, etc. It was my go-to reserve when my kids were ill This is my first go-to home medical reference when my children were ill, which was not so often - none of these were vaxxed at all. I highly recommend it!. Free your brain, exercise common sense and educate yourself.. I am way prior to the vaccine game as I am acquainted with the secret vaccine courtroom run by the feds, I really believe parents that possess proof of injuries (anecdotal is certainly all I want) to their children post-vaccination and my pox knowledge is plenty of to continue to opt out as a grown-up. Kudos to Dr. Tenpenny (reading her state no to vaccines book next) and all of the parents out there that have posted state laws and regulations and opt out information when it comes to vaccines as a per-requisite for school (vaccines aren't mandatory for kids so assert your parental rights). A great overview of the scientific function of fever in disease, and the roll of liquid intake during illness...you get what you pay for. Once I started my healing trip (fired all improperly qualified doctors on paper) and moved nearer to character by changing everything I was eating, drinking and considering, I got better quickly. After coping with the medical establishment and almost dying "under doctor's care" a couple of years ago, I could say that is clearly a true statement.. I'd love to possess all pediatricians as dedicated as Dr.. And they are as healthy as is usually to this day. "Key To Health: Stay Away From Doctors" (page 23) When I began to read this section We shook my mind in agreement and smiled... Wise elders that I paid attention to over the previous few years all said the same thing. I take advantage of this for baby shower celebration gifts! I was shaking my head in agreement once again. So I politely informed her that I was vaccinated as a kid AND hadn't one but two battles with the not so childhood disease that is the chickenpox. That finished the vaccine hustle immediately.. You don't have to live in fear!." "This position is shared by many other doctors who have been moved to look objectively at the outcomes they have experienced within their own practices rather than continue to acknowledge hat they discovered in medical college. The wise doctor also says: "I understand it might be difficult so that you can accept the fact that. Vegan doctors such as retired 100 year old heart doctor Dr. Ellsworth Wareham is definitely a doctor I pay attention to and respect for obvious factors, along with others that chose to acknowledge experience as the instructor and educate patients accordingly. The book is outdated in a few areas because medicine offers advanced, but I love his perspective on medication and his suggestions for treatment OMG. Wow. Mendelsohn's stage that it is indeed difficult to trust that doctors (minus a small few) are harming the general public most importantly because they refuse to believe the real science, practical encounter/proven outcomes in the bodies and lives of real people. Listen to smart elders like Dr. Pam for including that important dialogue in her publication "My Life In Three Works", which speaks to Dr. EASILY had not

browse it with my very own eye I would not need believed it. To add insult to injury, licensees (doctors, nurses, dietitians/nutritionists, et al) cannot legally say certain items. Mendelsohn and consider decisive action by carrying out everything in your capacity to protect kids from avoidable harm. but liked that there is a doctor backing them up This is my go-to book when I'm wanting to read up on things for my children. This book is for individuals 18 years aged +, with and without kids, with the ability to read, comprehend and believe logically. I recommend this reserve to all fresh (and seasoned) parents! Therefore will 13 (8oz) glasses of fresh pressed organic carrot juice, 3 organic plant structured meals, medicinal herbal products and yoga, on a DAILY basis, for life. To be even clearer, clean meals is chemical free, animal/seafood free, could be eaten in its natural condition (as grown) or is usually gently cooked (rice, coffee beans, peas, gently steamed meals) and will, certainly, cleanse, nourish, heal, reinforce and protect your body. Clean food are available at your neighborhood farmers market so be sure to start shopping there this week. Independence must be alive and good elsewhere because it is nowhere found in the US when it comes to health and healing. Don't be misled by the title or publication date. Great Amazon feature. In times when we no more trust our very own instincts and understanding as parents, this books is simply an ideal guide through coping with illnesses in a way that we can also protect our kids from unnecessary and often dangerous interventions. We don't treat fevers unless they're actually high (extremely uncommon) and even after that, we try other activities first. When a doctor explained my 10 yr aged child had athsma, I considered Dr Mendelsohn who recommended a full and thorough cleaning of her room including pulling up the rug and acquiring down the drapes. I'm so thankful to Ms. Dentists can't tell the reality (mercury fillings are dangerous), but when you have them taken out dentists are wearing hazmat suits to remove mercury fillings because they're indeed dangerous, pollute and harm the human body, hence the hazmat equipment and strict removal techniques. She was on me such as a mad doggie until my voice went up a few decibels interrupting her intense sales pitch with a firm, across the board, "no" following the pox story. AM Brown Finance Teacher P.S. They didn't ask to come here. so I am speaking with adults that are and also have home schooled AND have home schooled kids in college, to learn more from successful parents... In the book what "pediatrician" and "child" can very easily be changed with "doctor/PCP/OB-GYN" and "person" because his straight talk wireless, sage advice, working experience and keen analyses, is for all to consider. Love that! I would love to have all pediatricians as dedicated as Dr We once had a pediatrician rail at me for liking this book-but I stand by my dedication to it.. Mendelsohn is definitely in assisting those interested in learning to be a even more astute, observant parent in the partnership of assisting health in our children. This publication is crucial read. who was simply around before antibiotics and also has a good deal with on the healing features of the individual body-along with what to consider should choices for treatment need to become more invasive than meals, fluid and rest requirements. I went to public school. A "cry from the wilderness" to get calm rationality and traditional perspective in the frightening milieu of crisis management style medical care that dominates our society today. I had no idea what the nurse was discussing because I did not know there have been "adult" vaccines and I never bought in to the flu shot frenzy. A must read for every parent who wants to protect their children This book has been so enlightening and empowering. As a teacher, I see too many children and dependents suffering as a result of ignorant adults that won't simply listen, learn, think and work logically. It revealed information that continue to be a reality more than ever. It's eyes opening, and also teaches you how exactly to identify and react to serious situations. I have 3 kids and have been progressively searching for other ways to handle day to day things with them concerning their wellness. Oncologists can't legally recommend a real plant based detox and herbal remedies to cleanse your body and blood to "fight" cancer, but

they spook sufferers into injecting medicines (chemo) that are known carcinogens and may cause death, but by no means give individuals the created literature that says the dangers, in writing! I have never written an assessment but knowing that I would be motivating somebody to receive the precious info this doctor gives, I felt I got to do it. In general, we have a very hands-off approach to ailments. It is much easier to prevent disease and involuntary encounters with the medical establishment and "law enforcement". Exactly what I was looking for Exactly what I needed! We visit a local doctor that also suggested this publication to us because he takes a holistic approach to medicine aswell. I'm not in the medical occupation so I'm right here to let you know, yes, an apple a time could keep the doctor away. It is also a great gift to provide at baby showers :). People are always a little surprised by the name, but once you read it you can observe how many fears it could settle, and how much better you can experience not really running to the physician for every tiny little point your kid does. It's such a waste materials of money and time! Be kind to yourself and read this publication :). Dr Mendelsohn Rules! I found this book invaluable when We was raising my kids in the 1980s-90s therefore i ordered a new copy for my daughter-in-regulation. As adults we are responsible for doing everything within our power to protect kids and dependents. Actually, I never took some of them to the doctor, no, none of the foolish 'well baby visits', they certainly are a unfortunate joke. This book is for just about any parent seeking an alternative solution to childhood illnesses. Still the best Yes, this is written in 1987, thus some things may have gotten outdated, but even now, we'd all be far better off following Mendelsohn's information after that any current doctor I've ever browse or met. He is still the best! Every parent needs this book! That is a life changing read!). In a single week my child was completely healed! Awesome reserve. This book, plus a few all purpose in the home medical manuals (I raised my children in the 90s, ten years prior to the internet became widespread therefore i needed a few books on the shelf), was all I used to treat my children. The vaccine chapter in the reserve is insightful. Great info I enjoyed the book. They all came through just fine and today with real lifetime immunity - except right now with the chicken pox vaxx leading to shingles, this is a genuine risk since adults no longer get their 'boosters' when you are exposed to the existing crop of children with the pox. I was looking around at vaxx books and noticed this and Dr. Mendelsohn's books recreate fond memories. Also examine Confessions of a Medical Heretic. Two awesome books. Fabulous! It really is absolutely fantastic in order to give this book to my children as it was the publication that gave me personally the data and confidence to hear my instincts when raising them!! We as parents could make more wellness decisions than we think that! SIDEBAR: Insurance is normally a kind of payment so do not be misled basically because the total bill is not the patient/consumer's upfront financial responsibility. Stay away from doctors and hospitals unless it is a real crisis (strike by a mack vehicle, unconscious and sizzling hot pepper powder or tincture under the tongue didn't work to regenerate me). If you want to understand the fitness of your kids more then that is a tool for you personally! And, yes, each of them had whooping cough, chicken pox and a few other 'deadly' childhood diseases, spread by the vaxxed neighbor kids who were always ill with something. This book really just re-affirmed most of the things we had currently known, but enjoyed that there is a doctor backing them up, and it's really in writing therefore we are able to reference it as often as we have to. In Pam Grier's memoir, her ivy group doctor told her in secrecy (since it could have ruined his popularity otherwise) that there is nothing more that western medication could perform (prepare to die with cancer if you don't follow through on the right way to heal tumor) and REFERRED her to a Chinese Herbalist! THIS BOOK CHANGES YOUR LIFE So happy I was told about this book. Significantly has changed my thought process. First time mom right here and I'm happy I can read this and also take control of my baby's health with natural approach instead of running to the hospital right away.If you provide good

nourishment and lifestyle habits as part of your parenting ideal, this reserve will give you a good outline of common disease patterns and what supportive treatment to provide from a Dr.
