Holding Your Ground: Preparing for Defense if it All Falls Apart

[continue reading](#)

HOLDING YOUR GROUND can be an instructional guide and planning device that addresses defensive planning of a location. If the government can't protect your house, farm or property, HOLDING will educate you on how. Covering topics ranging from hiding in simple sight to pre-positioning of supplies, HOLDING uses good sense, military strategies and historical illustrations that enable you to prepare for defense without inside your property's value or appearance. Keeping will educate you on how to configure your house, train your group, and properly equip any area for defense. Many people have preparations for meals, water, shelter and personal protection. HOLDING covers just about any aspect of protecting you and your family in the case society breaks down.

Needs Work This book is very poorly put together. I expected something a LOT more refined and much more cohesive in believed. For example, the text will refer to colored arrows in the diagrams and the book contains no color.! On the house plans, they look quite modern and leave a lot of surfaces in the new living room area which is excellent. The content is not always cohesive. I like this author and also have a lot of his books. Moreover, many of the techniques "Joe No one" recommends could possibly be relatively very easily accomplished and so are not very expensive. I did so learn some valuable tips and read some interesting methods, but overall I think the content was much too amateur. It is an apparent knock off of a different print. Worthy of the expense of the book alone.

Informative Book This book made me reevaluate how I look at my home and I WISH I had read it BEFORE my home was renovated. a formerly unthinkable scenario that is, for me, becoming less "unthinkable" each day. A few of his plans derive from infrastructure and providers that are not likely to be discovered if "everything falls apart".Written from a clear military potential, this book covers many fundamental considerations, starting with not only a systematic survey of the strengths and weaknesses of the area to be defended, but also with an honest appraisal of the attitudes potential defenders would provide to this dire situation i.e. by Joe Nobody Another Joe Nobody publication for my collection. It then proceeds to very systematically outline various protective strategies, techniques, and in small unpleasant section, to list some of the types of weapons and the essential equipment that would assist you to "hold your ground. Five Stars Good read, well written.

There are many clear drawings/illustrations that help to show what he is trying to teach but, unfortunately, on the other hand, the pictures used in this work are almost uniformly away of focus and muddy--making it very hard to also see what he is attempting to illustrate.A minor criticism is that several times in this publication the author identifies the "red arrows" that are said to be in illustrations, when the complete reserve is printed in black and white only i.Finally, the writer often writes that there are many military manuals or other publications that give more detailed information on this or that subject which he is just outlining. no red or any additional color arrows.I highly recommend this book to get you thinking extremely defensively and thinking in ways and about factors that you probably do not currently consider. Our times of living off the surpluses developed by past generations, of peace and plenty, and a hazy disconnect from truth, appear to be they are coming to an end folks, and perhaps an extremely abrupt one. So, period to "pay attention" and prepare, to be the ant and not the grasshopper.e. One thing that I believe would have significantly increased the usefulness of this book is a select bibliography of many of the key military manuals and other publications that he was discussing. "Holding Your Ground" is a well crafted, generally clear, straight-forwards, and useful survey of a primarily defensive/passive strategies and methods that could well save your valuable life, if points should all fall apart;A well planned bedroom move at the front end of the home to the back of the house is still on but after reading this book, the new home windows at the front of the house will no longer be large white casement windows. Instead, they will be two rows of NARROW HIGH DARK windows running across the front which OPEN IN (therefore people outside cannot tell the home windows are open from the outside) to allow in ventilation/breeze but are also as well little and high for you to definitely climb in. Terribly distracting and occasionally misleading.. I found venting round home windows (any size I want or color or high temperature/cold value, whatever) on a Chinese website and I was thinking about buying a few very small circular peep hole windows which open by turning(They don't really open inside or outside) but actually spin open so half the window is usually venting when open so people can look out.I had french doors put in before I read this book plus they are getting removed now. Too easy to break into and in storms, to easy to blow in.The checklist is fantastic also. Very useful, straightforward, systematic exposition/overview of details that could save your valuable life. Holding

Your Ground: Preparing for Defense if. It looks self published. That is an extremely amateurish publication and I'm very disappointed.. Thank goodness I bought it used. Nobody should browse this book from "Joe Nobody" No wonder the author didn't use his true name ~ the book does not have any content worth any of your period. I plan to build a bookcase against that wall seen in a magazine that's also a ladder but doesn't appear to be one so if somebody wants to appearance outside, go for it. Nobody should read this publication from "Joe No one"! at its most elementary level, could you grab a gun and shoot someone who was intent on robbing or eliminating you and yours. In some areas the 'author' offers put in some believed, while in others 'he' is merely printing some poorly thought out opinions."I particularly liked his suggestions for "hiding in ordinary sight," camouflaging your location and/or making it look like burnt out, abandoned, and/or currently looted, and several strategies for using camouflage netting inside a framework, including hanging it across windows and tightly covering doors with it to create any attempted entry by attackers a lot more difficult, this provides you with defenders much more time to react. One Star Little severe, seriously but a supplementary property is definitely ridiculous! Spelling and grammar are poor in many areas.
