Needed For A Long Time! Excellent! I recently purchased this quantity because I am involved in a ministry that helps individuals and households who state to have demonic influence or to be under assault. May God defend him in his work. His reasons are compelling, but there can be plentiful evidence of which he seems unaware. I can state without reservation that work a lot more than fills that need. Overall, a generous work by this good priest. Father Ripperger's three-volumes contained in that one massive book is a great resource for people like me who want a solidly "orthodox" and Traditional (big "T") response to the promises of modern psychology - specifically with regards to accurate diagnosis in cases where psychological problems and demonic existence are confused (because they often are.) Fr. Ripperger, who holds a Ph.D.. One of the more fascinating sections comes at the beginning and lays the philosophical base for a genuine Catholic psychology - it is his treatment (explanation) of who we are as humans - a refreshing Catholic anthropology. Five Stars Phenomenal book! D. For instance, sin, because it mars the relationship of God and grace inside our life, will naturally have an effect on our mental health. Of training course, psychiatry and addressing chemical and physiological problems are a very important factor, but treating a directee (individual) with an improper and reductive understanding of that human being being that is before you can be destined to bring about less than optimal results. Nothing like it If you're mildly interested in mental health insurance and psychology from a Catholic Thomistic standpoint and also have a decent background in philosophy, but this book Four Stars good but difficult reading A complete treatment of a difficult subject. This function is very scholarly yet obvious and understandable, is normally well sourced and footnoted with exceptional explanations. If you are a Roman Catholic (or a Christian) who has thirsted for an authentic psychology and explanation of the human being condition that suits solidly with Sacred Scripture and the teaching Magisterium of the Church, this is where you should begin. Fr. Thank you Father Ripperger. At last, sound understanding of human psychology! Great book! Finally, sound knowledge of human psychology, completely grounded in the normal sense philosophy of Aquinas. Anything besides that is total disorder and misunderstandings, which is unfortunately 99% of psychology as taught and practiced in the West today. No wonder everybody's so smudged. If you would like to get on the right track to understanding the human being mind, the human being soul (psychology means "study of the soul") then this is a great place to start. Real help for good mental health I have spent thousands of dollars in psychologists and I must say that this reserve has helped me just as much. You won't have good mental health until you understand how much sin will to damage the psyche.. you certainly do not need to become a psychologist or studying psychologist to benefit from it. Fr. Ripperger explains the basics of psychology backed up by philosophy that if were more widely known and understood would result in a happier and better globe.. He does similarly with the material bodily faculties of storage and imagination and with the many sensitive appetites. However, psychology today denies this basis and thus its treatment and solutions aren't working - how do it?, pays close attention to design and purpose. He obviously describes the look and purposes of the immaterial human soul consisting of two its faculties, intellect and can. Chad Ripperger, Ph. Philosophy blends into Catholic theology as he treats of virtues, grace, the sacraments, and angelic influences (from both great and evil angels). I recommend it wholeheartedly and make reference to it frequently. Ripperger shows that the mind was designed to think logically, meaning that the mind's purpose can be to discover truth. Ripperger! Wow, Fr. but it was also delivered poorly so is probably not publishers fault.! What I've very long needed is something similar to this work to help flesh out a cogent knowledge of human psychology that is from my faith's point of view (Roman Catholicism) and will not rely upon what I consider to end up being

the pathetic underpinnings of contemporary psychology. A few of the grammar is questionable. Nevertheless, the writing is obvious throughout. Excellent work. I am hoping I obtain to meet up with the author one day. I purchased it because I wanted to know even more about how to help veterans returning home from the war. Only reason we didn't give this 5 stars may be the binding is usually ripping away. Thank you so much Fr. However, unless the mind is properly qualified, that purpose will end up being frustrated. That is a must browse for any serious Catholic.

Understanding style and purpose facilitates mental health. As a scholastic philosopher, Fr., offers a lot more than insight and help into demonic influences nevertheless, and covers an enormous range of problems with regards to the philosophy of mental health and illness (demonic impact when it comes to psychology is one small section of the publication - although a very helpful one to me). I love the book and think the materials is incredibly interesting and important. However, I wish it had been presented a bit more clearly, and with clearer definitions in advance of the Thomistic terminology. It really is excellent! A few of these people aren't, others of them genuinely are." first, he discloses from the beginning that he is not just one. Recommend for councilors/psychologists/psychiatrists and learners of them regarding the examine about him not being a psychologist which book being "harmful. second, often times he doesn't provide examples (while you wish he would) to be able to prevent someone from self-diagnosing wrongly. furthermore, you discover that his market isn't really those with mental disease at all but psychologists (professionals who open up minded but hopefully prudent in what to introduce in their profession.. great subject matter - preparing for winter, lock straight down reading. Excellent work. finally, just b/c he is not really a 'certified professional' is not to say he's less intelligent than those who find themselves.. he probably knows a lot more than most specialists, which explains why he may become so important of some of their methods to mental health/disease in the reserve. It answered SO MANY of my questions and was extremely helpful in understanding PTSD especially in the deliverance area. That requires a comprehensive education. ***** Amazing book. Loved it and refer to it often. Ripperger explains the basics of psychology backed up by philosophy that if were more widely known and understood would lead to This book is invaluable to daily life\ for everybody;. Classic. I like the book and think that the material is incredibly interesting. Offers answered so many queries I had.). A must have for the Catholic Psychologist in every of us! We are not mere advanced pets, we are made imago Dei - in the image of God, and that should shape every aspect of psychology.. Furthermore, one got to know the applicable first principles to strategy any problem. A complete treatment of a difficult subject matter.! Loved it and make reference to it frequently for study. Dad Ripperger brings a decidedly Thomistic approach to most of these (which appealed if you ask me instantly), and replaces the woefully deficient psychology of Freud, Jung, and others with a cogent one. Perfect Five Stars Perfection!! considering that he's an extremely experienced exorcist, what that position requires is constant research in psychology and also working alongside doctors in the psychiatric field. Ripperger can be a powerhouse! He cautiously delineates the Classical to Contemporary usage of words and terms in order to avoid some common confusions. Perfect well made;. He thoroughly. All in all, the publication stands counter to contemporary humanities educators, who generally take relativist positions of all issues. My only objection, and I may be wrong, is certainly that he dismisses the idea of the human unconscious.!!
