Created from a "farm-to-fork" perspective, Food Security: Theory and Practice offers a comprehensive summary of food safety and discusses the biological, chemical, and physical agents of foodborne diseases. Later on chapters offer an overview of the risk and hazard analysis of different foods and the essential advances in technology which have become essential in controlling hazards in the modern food industry. Early chapters introduce learners to the annals and fundamental concepts of food protection. Topics Covered • Risk and hazard analysis of goods • Preventing foodborne illnesses and diseases • Safety management of the food supply • Food safety laws and regulations, regulations, enforcement, and obligations • The pivotal function of food sanitation/protection inspectors Instructor Resources PowerPoint Presentations, Test Bank, and an Instructor's Manual, can be found as free of charge downloads. The text covers critically important topics and organizes them in a manner to facilitate learning for those who are, or who may become, food safety professionals.
