If you are not used to preparedness planning then I recommend this book. In case you are well-versed in disaster preparedness, many of the suggestions in this reserve will be acquainted to you. In case you are not used to preparedness planning then I recommend this book. Nevertheless, unlike other reviewers, I found very little in the reserve that dealt particularly with dealing urban settings. Very detailed to add county emergency routes that I can not recall coming across in other material in Book and online. I was longing for insight into things such as guidelines for vehicle and foot travel in built-up areas, community networking and patrols, etc. For those who have backpacking experience much of this book will be extremely familiar. For instance, fire beginning, building shelters, open up fire cooking, and the odd admonition on page 133 regarding open fires: "Just constantly be sure to have a lot of ventilation and steer clear of sitting too near to the fire where you end up breathing more smoke cigarettes than air". Really? The one section of the book that I thought provided some excellent insight was regarding bathing and laundry. Both are neglected topics in various other works I have read. It is definitely well written and the design is attractive. I keep referring back again to this book over and over.
