Technologies for Active Aging (International Perspectives on Aging)

[continue reading](#)

The task of population aging requires innovative approaches to meet up with the needs of increasing numbers of the elderly. The proposed book is a landmark publication in the area of technology and aging that will serve as a statement of the current state-of-the-artwork and as a pointer to directions for future research and emerging technologies, products, and services. Emerging information and communication systems (ICTs), such as for example pervasive processing and ambient assistive technology, have substantial potential for enhancing the quality of existence of many older people by providing additional security and safety while also supporting flexibility, independent living, and sociable participation.
