. I'm not even entirely sure the people who "developed" these "quality recipes" have a simple understanding of the English language! And there is the fact that the majority of the "recipes" either have way too many ingredients that aren't even pointed out in the directions, but you will find ingredients in the directions that are not one of many ingredients! I may get one of these few of these quality recipes but really was hoping there were more "Normal" ones. I'm not really trying to be rude, but there isn't even proper sentence structure going on in 99% of the book! Or that the name of the "recipe" doesn't match what's being made (i.e. A cherry balm that just offers chocolate in it)! I'm pretty sure I lost many brain cells trying to decipher this rubbish! I only gave it one superstar because I couldn't provide it zero! Among the dishes can be titled "Creamy Lip Balm wit Cherry Taste" yet ingredients does not consist of any Cherry Flavor or information on how much to use. I will start with what I really like about this reserve. I won't be rendering it now, with this publication. I must be honest, I have hardly ever made lip balm before picking up this book. There are a handful of balms ready using Kool-aid and vaseline, which are ingredients that are no problem finding. That is a selling point in my brain. Now, the reason why the book shed two superstars is this book is not for the novice. There is absolutely no glossary explaining the various oils and butters utilized. I hesitate to try these dishes without understanding if or when the the lip balm can be expected to expire. Additionally there is and this may be the worst part for me, no idea concerning how long a finished product ought to be kept before it expires. Explaining how exactly to melt the various products together isn't mentioned, instructions merely tell use a dual boiler. That last little bit is very important because the ingredients frequently include powdered sugar, cocoa and koolaid. There is no suggestions on how to locate the substances, or containers to hold the lip balm. The answer might be two weeks or eight years, but to those folks unfamiliar with making lip balms, don't know the answers to the issue. I would want to see this book reworked to accommodate novices, or retitled to specify it really is for seasoned lip balm creators. Poorly edited This person must decide on a single kind of measurement and use it throughout - you've got one recipe that uses ounces, then there's one with grams, then the next uses cups and calculating spoons. Some recipes even use a combination of two various kinds of measurements. I think I my IQ may have dropped scanning this This "book" is a waste of both seconds it takes to download it! That alone makes me think these aren't her dishes at all, and they were simply scraped off the web. Homemade Lip Balms The steps for preparation are easy when you have the ingredients. The publication gives careful times so you know how enough time it will consider to make the lip balm. The only real picture is the one on the cover, so you use your imagination to visualize what the completed product appears like. It would have been useful to know an estimated shelf existence for the balms and where in fact the ingredients can be bought. Besides the large number of typos, there have been several dishes that promised an ingredient in the name but did not have it in the instructions. So initially it looks useful and comprehensive but in the end leaves you just overwhelmed using what recipe to try out and all require purchase of ingredients improbable to already have, so in the end a useless assortment of bad and the good recipes. Hmm I would recommend the writer possibly work this through spell check a time or two and have another person review it for sentance framework. Beyond that I was amazed a book whose title begins with organic has dishes containing lip stick shavings, petroleum jelly and kool aid. Not really for the novice! So when for it being "natural", I sure wouldn't call using petroleum jelly, lipstick shavings, and Kool Help "crystals" as bases, coloring, and flavor/scent natural. Needs editing. Plenty of recipes in no particular order Lots of recipes in here, but here is what is missing: there is no advice in regards to what each recipe is good for or any ranking in it, no advice as to where to get the ingredients and how much they cost, what the ingredients are, whether any substances are toxic or not, any allergy advice, how the lip balms come out, even

what containers to make use of is unspecified or where you can buy them. Five Stars Good information on different ways to make lip balm Good read Good read plenty of useful recipes that may done aware of simple ingredients thank you so much nice book Four Stars great informative book Two Stars Don't waste your cash Four Stars Good Lovely recipes Lovely as presents , and you could try your own combinations after you experiment a little with the recipes in the book
