Plague December 7, 2014
A Book Review of "Plague" by Kent Heckenlively and Judy Mikovits
By Russell Dobkins
This is a "Great Book"! I've examine many "Great Books", including "Our Stolen Future" by Dr. Theo Colburn, "Silent Spring" by Rachael Carson, "Pandora's Poison" by Joe Thornton, "Radioactive Heaven and Earth" by IPPNW, "Nourishment and Physical Degeneration" by Dr. Weston Cost, "The China Study" by Campbell, "Not really On The Label" by Lawrence, "Harvest of Empire" by Juan Gonzalez, "Hypothyroidism, The Unsuspected Disease" by Dr. Broda Barnes, "The Death of Money" by James Rickards. These are the options that Judy Mikovits understood, and brings up in her book. Each of them shed light on what is going on. I studied Chemistry and Biology in University. All the things I have studied, BODY and Physiology, Microbiology, Genetics, Cell Biology, Toxicology, Immunology, Neurobiology, Organic Chemistry, Bio-Chemistry, Neurobiology, Pharmacology, Human Health and Nourishment, Genetics, Developmental Biology, Infectious Illnesses, and Virology, have place me in a position to really appreciate the work Judy Mikovits did. Then they utilize the cell DNA/RNA to make even more of themselves, using all of the resources of the cell, which kills the cell, they burst out from the cell, multiplied to spread through the host's body, via the bloodstream, and infect more cells in various tissues.

The Foreward; "AN ILLNESS Able to Affect the Economies of Nations", by Hillary Johnson, says it well. Dr. Mikovits discovered, using rigorous scientific method, high grade and up to date, state of the artwork, laboratory techniques, a fresh man-made virus. The stress can be exercise, concentrated thinking, switch in temperature, etc. Right now, here's the main thing in her description, "XMRV-like Virus". She and other scientists discovered this virus in the bloodstream of the "Well" Population, and estimated that between 10-25 million Us citizens are presently infected with it. Judy was a twenty year veteran of the National Cancers Institute. Utilize the vast resources we now have available with the internet. What does that mean? Congressmen and Senators will get lots of campaign contributions. That means "manmade and living". M means Murine Leukemia Virus, as it is situated in mice, both crazy mice and laboratory mice, of the kind that are used to make human being vaccines and perform virology experiments with. R means "Retrovirus" which is the family of viruses that HIV is among. V stands for virus. She found this fresh virus in the blood of patients with Myalgic Encephalomyelitis/Chronic Exhaustion Syndrome, and children with Autism. The important thing to understand about retroviruses is usually that they mutate and change quickly. Retroviruses invade the DNA of living cells, place themselves into it, modification it, and take over the settings of what the cell makes. That she could write it, after all the horrible, unlawful, dishonest, therefore very stressful stuff that folks in power, do to her, because she was honest about revealing the reality of what she was acquiring, is astounding!

When the XMRV-like virus enters a new host, just like a human or a monkey, it can be within the blood, for a while. After that it disappears from the blood, by invading some cells, like white bloodstream cells, goes latent, and waits until the cells in that cells start dividing, to wake up and develop. What can awaken such a latent virus hiding in a white blood cell? That is a startling and essential discovery. Additional infectious antigens, such as a viral an infection would also stimulate white blood cells to multiply, and wake a latent virus. Without an arrest warrant, she was taken from her house, unlawfully imprisoned, and with out a search warrant, her personal house was seized, we. Helper T-Cells will be the go-getters of our disease fighting capability. Judy Mikovits paperwork how this happens in monkeys. Could it happen in Humans, too? Cortisol, that is the strain hormone, turns on the virus extremely rapidly, and continues to have it expressed. It really is known there are certain areas of the body, that certain viruses, have an affinity for. this publication gave me even more big and clear photos

of the proceedings! I think her lawyers could and should sue individuals who perpetrated a well documented injustice on her behalf, and we should help her financially to do so! Could the virus end up being latent within their white bloodstream cells, after that it gets fired up, by a vaccine, and replicates, and infects the nervous system, and other areas of the body? They are energetic in destroying invading organisms, bacteria, viruses, parasites, and also cancerous cells, anything that cause the alarm, that "this is simply not us", Helper T-cells destroy, and call in more immune cells to battle it. AIDS is caused when HIV invades and destroys the Helper T-Cells. An intriguing medical detective story that spills over into a real world fight to get the truth and stay away of prison for just one scientist, and a fight to stay alive and reclaim their lives for millions of patients. The CDC just makes the vaccine starter material. and potential remedies using anti-retro-viral therapy. Dr. Viruses and Micoplasma can't be filtered out of blood, plasma and vaccine, with the filters they had in the past, and only hardly with the new technology we have today. They are also called "Regulatory T-cells". That's because they regulate and stability the immune system.. All Health Care Specialists should read this book. Minus the Suppressor T-cells the "attack" aspect of the immune system goes wild and destroys "Self" along with "not self invaders". That is called a "Cytokine Storm", and also called "immune dysregulation". This is one of the most damaging parts of XMRV illness. The CDC probably arises highest one of many anyone who has trashed the victims of those experiencing this disease. Mikovits strike on the chance of Autoimmune Thyroiditis becoming caused by such an assault. Follow the clues. Maybe, MS and other autoimmune diseases like Rheumatoid Arthritis might be due to such a virus? Mikovits to construct a World-Class research team to look over the research files. Xenotropic, means man-produced and living? How is definitely XMRV transmitted? Well, as it happens that to create vaccine, a human being virus like polio is normally injected right into a mouse, after that infected tissue or blood is removed from the infected mouse, then that's injected into more mice, often, and then into a monkey. Then if the monkey doesn't die, and antibodies are made to the initial human virus, then that's a possible vaccine. Up coming they test it on Human subjects. But, what if the vaccine has something in it that is alive, unsuspected, unseen, unknown, unidentified, new, man-made, a hybrid virus? Imagine if some vaccines have already been contaminated with this XMRV-like virus? Is definitely XMRV a main reason behind our emerging degenerative diseases, could it work in collaboration with other bacteria and infections, and/or is among its main features to carefully turn off the disease fighting capability? What if this XMRV-like virus got into the MMR vaccine or others, back the 80's? Imagine if it is spreading in the populace, through contact with saliva, bodily fluids, blood transfusions, could it be airborne? "Plague", by Judy Mikovits, PHD and Kent Heckenlively, ties in this set of important books. This is essential! But, the legal expenses Mikovits incurred attempting to fight off Whitmore, left her financially bankrupt! Kent Heckenlively will a superb job of weaving together the countless essential elements in Mikovits's riveting story of her suppressed efforts to talk about her important research findings concerning XMRV. The family of Retroviruses are all related. It would be rather easy for a Human being retrovirus like HIV, injected into a mouse, to combine with a mouse retrovirus MRV, to create a hybrid Human/mouse retrovirus, that would live, reproduce, and become contagious. It might spread to other individual and mouse cells cultures in the laboratory, as Dr. Or, in another even more sinister vein, did something escape from a US military "Germ Warfare" lab? Could this fresh "Xenotropic" virus infect man, and spread. Anyone born after, state 1985 or 1990 will be unable to recall a period in their very own lives when this scourge was virtually unknown. Don't be

afraid to use pretty much as needed. I understand people who have it. Harvery Whitmore, a higher rolling Nevada programmer and political wheeler/dealer, who sued Mikovits, and had her illegally arrested, seized her data files and computer systems, and who also bribed the Judge Adams, with \$10,000, was afterwards convicted of earning illegal campaign contributions to the Democratic Majority leader, Harry Reid, of Nevada, and was sentenced to two years in jail. She showed how it spreads, elevated the alarm, described the tissues so infected, together with the methods of transmission, and characterized the outward symptoms of the disease it causes, ME/CFS and Autism. That is a Big Offer! Why did the CDC make an effort to deny, discredit, and hide her work? Also, super interesting trivia about all of the science academia world! They send people all over the world to get infectious diseases, gather specimens of the causative brokers, like H1N1, SARS, HIV, and provide them back to the CDC labs, alive. They culture them. Myalgic Encephalomyelitis/Chronic Fatigue Syndrome still does not have any treatment or cure. Imagine if something got from them? It offers happened before. Remember Reston virus, "The Hot Area"? Well, back the 1980's the technology to recognize such viruses was not so advanced since it is today. Check it out. Viruses and Micoplasma cannot be noticed with a light microscope. They're too small. Mikovits discovered that the XMRV invades and kills another kind of white bloodstream cell, the "Suppressor T-cells". I did not enjoy reading this book due to the writing design used to mention such a difficult topic. This may not be an exaggeration. I think an investigation is certainly warranted. Sucrose or glucose is definitely always put into viral culture medium to grow infections. Mikovits found, then we cannot depend on the CDC to carry out an investigation. It might lead to a HUGE problem, lawsuits, civil and perhaps criminal. I indicate, if you knew that something you provided the public, to vaccinate the kids was contaminated, and folks were injured, as with Autism, and ME/CFS, well.. Bravo Judy! Minus the Suppressor T-cells, to stop the immune attack once the invaders are completed off, the various other immune cells hold attacking and secreting messenger chemical substances called cytokines and chemokines, which contact more white bloodstream cells, macrophages, killer T-cells, and the immune attack continues and grows, along with inflammation. Class action Legislation suits would come forth. Now, this new XMRV-like virus, is certainly a stress of mutant viruses, which are like MRV, but because they're mutating with each replication, they are changing into a swarm of viruses, each different and changing, constantly. The big Pharma businesses make the real vaccines. Thankful this publication was written! It depends on who understood what. Was someone negligent? Who is able to you trust? What can you trust? Until scientists are funded for looking into real root factors behind disease, we are going to continue to experience an enormous upsurge in disability and mortality. Next, Oregano oil is antiviral, both taken internally, and utilized externally. Vaccines? Mikovits documented that XMRV does. THE UNITED STATES military offers experimented on uninformed American citizens, before. Or could it have come from somewhere else? That is possible. It could be so easy to make such a hybrid virus. What's causing this influx of autoimmune disease, different cancers, Autism, Chronic Fatigue Syndrome, ALS, Lupus, Fibromyalgia, Parkinson's, thyroid problems, Multiple Sclerosis, allergy symptoms...etc. Whatever, the reason, we still have a Huge problem. Thousands of people in America and world wide, are contaminated with a fresh man-made virus. jaw-dropping story from the beginning to the end. That is grow them, to allow them to research them and make vaccines from their website. Dr. They keep all this stuff frozen, so it is still there, and alive. It's a little bit comical to me that crooks like Whittemore and Cohen among others so narcissistic concerning believe that folks will believe a freaking journalist or

theiving ass tycoon like whittmore over anyone who has risked everything to provide the truth to light. So where do we go from here? If enough people read this reserve, and give it with their doctors, and give it to University Professors, and talk about it with their friends and family, and write letters to the editors, and write reserve testimonials, and post on facebook, and continue talk displays, and write and call your senators and congressmen, the story will get out. Call for a study! If a class action lawsuit were to arrive ahead, a sharp legal team could subpoena all the documents of virus analysis and vaccine programs performed at the CDC during the 1980'-90's. It can help you safeguard yourself, your family, as well as your patients. Right now, here's the truly scary part. She knows what she is doing! Get access to the kept cultures both viral and cells, frozen, at the CDC, and use modern techniques to search for the XMRV-like virus in the vaccines and viral cultures. They suffer terribly. Finding and treating factors behind disease is not in the best curiosity of the medical system. It really is chilling & There might be other federal companies involved? Possibly the pharmaceutical businesses will be found to be complicit? That is why we only have drugs that treat the outward symptoms of disease while the real causes improvement under the surface. Until this all gets investigated and the Truth comes out nobody will trust the federal government, the doctors, or the big drug companies. The big pharma businesses will lose the big bucks! They'll fight it, filthy techniques and all. X means Xenotropic. It could get ugly. People could get hurt. Appear what happened to Dr. This is soooooo vital that you everybody to read. Could this describe Autism abruptly appearing in children after a vaccination? Oregano essential oil can be applied to a band-aid and placed on plantar warts and additional warts, daily, for a few weeks until the wart disappears. all the documents of her study, and her computers. She was imprisoned without charges. After that she was sued, while being held in in jail, in another condition, illegally, and because she couldn't arrive at the out of state court, that was presided over by way of a Judge Adams, in Reno, Nevada, who was simply bribed by a \$10,000 marketing campaign contribution by Harvey Whitmore, and who was simply awarded a multimillion dollar default judgment against Mikovits! Judy Mikovits can be an ethical scientist, somebody for whom the truth is more essential than ego or money, a rarity in today's society. She paperwork it in her publication. This gal provides balls! She stood up to the scoundrels! let's remember about genetically altered foods. Mikovits realized it. Criminal charges had been dropped against Mikovits once the information of the case became obvious to the Nevada District Attorney. Her book reads such as a murder mystery, following clues, examining the data, following all of the leads, piecing together the picture, gradually, using modern laboratory techniques. That Judy Mikovits could continue her work, give talks internationally, prepare her lectures to the various other Public Health Professionals at the NIH, CDC, FDA, and create this book, can be a testimony to her determination, power of personality, perseverance, and dedication to this very important work. As her research evolved, Mikovits uncovered a retrovirus, named XMRV (xenotropic murine leukemia related virus), in much of the chronic illness population. HIV comes with an affinity for Light Blood Cells, too, the Helper T-Cells. Some people believe in Truth and Justice. Nevertheless, as she docs in her publication, the judges and politicians in Nevada are, well shall I say, "they can be influenced by cash". As a Health Care Professional and an Educator I believe Dr.. The Suppressor T-cells are had a need to stop the attack when the battle is over, once the is normally invader destroyed! After that, hire Dr. As I have been studying the molecular biology of infections, and what can be carried out to take care of such infections, I will keep you with some practical things you can do to prevent or get over viral infections. Among the important things I have

learned can be that the amino-acid L-Lysine stops the growth of viruses. Makers of virus culture press are careful to not get L-Lysine in it since it established fact that L-Lysine inhibits the development of infections. The dosage of L-lysine needed to prevent a viral infections is 1000mg, 3 x a day, with foods. That would be very significant! L-lysine is effective against H1N1, and Herpes simplex. The Me personally/CFCluster outbreaks were first noticed by the general public and press in the early eighty's in Incline Village, Nevada. L-lysine can be an essential amino acid. However, among the reasons scientists cannot duplicate Mikovits's results was because they didn't follow her protocols. Another thing that is important would be to have a diet rich in the nutrient minerals zinc, copper, and manganese. It also relieves anxiety, and improves disposition and cognitive function. Athletes like it because it helps build connective cells like muscle mass, cartilage, bone, ligaments, and tendons. It also makes more reddish colored and white bloodstream cells. It certainly makes you stronger! It was frustrating to wade through a constant liturgy of anachronisms and keep them all straight. Now these diseases are commonplace and it's almost as if they're being accepted as regular! It is effective and safe. The CDC? It really is effective against Human papillomavirus, within plantar warts and additional warts.e. Human papilloma virus is leading to a fresh epidemic of oral cancer and warts, along with genital warts. Oregano oil can be strong, it functions, and it tastes great in juice and tea! XMRV was first found in Human prostate cancer cells! It has been found in India and China for a large number of years, and is normally highly antiviral. and unbelievable truth shipped like SiFi thriller! They're our first type of defense against viral invaders. Animals and some plants make mannose binding lectins, which bind to the sugar molecules on the surface of invading micro-organisms, and when you have lots of sugar in your bloodstream, the sugar binds to and disables your mannose binding lectins. Avoid sugar just like the plague, and don't give it to a unwell patient, IV or elsewhere. Since, the CDC is wanting to hide what Dr. Sugar feeds the virus! Avoid sugars in your diet! Sugars also causes cancers to grow. Maybe that's because ordinarily a virus is usually in the tumor, causing the tumor. Next, Resveratrol cream provides been found to be as effectual as 5% acyclovir cream on Herpes outbreaks. Another great antiviral herb is *Andrographis paniculata*. I anticipate it to be effective on papilloma viruses, too. It also really helps to relieve the swelling in the "Cytokine Storm" which is so devastating to virus infected patients. There is a book I would recommend, "Herbal Antivirals, Natural Remedies for Emerging and Resistant Viral Infections", by Stephen Buhner. We are ALL affected. We can use such plant medications to heal human beings and animals. It works! Dr. Buhner is fairly advanced in his understanding of virology and plant chemistry. For just one, the timeline jumps around making it confusing to follow events. There are not many drugs which are effective against infections. But, there are various herbal products that are. I hope this helps. An unbelievable true tale! James Duke, in his book "The Green Pharmacy", recommends, can be Lemon Balm, *Melissa officinalis*. It is in the mint family members, along with Oregano. It tastes delicious, so when all of the mints do, provides strong antiviral constituents. You can beverage it in tea, take it in capsules, or tincture the leaves and stems, and consider the extract. A dosage of 3000 mg/day isn't high. I watched the YouTube video of the recording of the sooner scientist discussing bringing some particular contaminated monkeys to make more vaccines, and that started up the HIV and Helps, but now I know more depth of the problem. The initial CFS outbreak was among 198 doctors, nurses, and staff at LA County Hospital in 1934-35. Lastly, I recommend you research the things I've recommended. Instead Dr. Execute a key word search on *Andrographis paniculata*, and oregano, and how vaccines are made. It will be logical to consider XMRV in biopsied thyroid

cells in sufferers with Autoimmune Thyroiditis. It appears the concern for all those whose failing health crises spawned the necessity for such research had been low on the priorities list. Information your own education, by what you should know. She calls it "XMRV like Virus". Most good medical schools now have almost all their classes, lectures, and labs, online, for free, for anyone who wants to find out how to do something. They didn't possess genomic sequencing and PCR. Many medicines were first discovered in plants. RD "Plague" by Judy Mikovits, PhD is a must Browse For A Glimps Into The Quest for Scientific Truth And THE PRICE To The Researcher. Here are some of the problems that require addressing with further research. So many have to thank Judy Mikovits, PhD, for risking her carrer to fight as a scientst should, the fight to tell the truth. The Me personally/CF Community along with other chronic illnesses owe a whole lot, to this Scientist. What's this virus? She developed a Retrovirus, not really HIV but like HIV in that they are both retroviruses. The Scientific Community did not desire to continue the study that would verify or disprove Dr. Mikovits findings. Additionally it is called an autoimmune attack. So comprehensive and readable that it captured the attention of my 17 yr old. This was like de'ja'vu quest for a remedy but we were dealing with ME/CF and a 21 Century search. It must be effective against various other viral infections, aswell. Other Scientist seemed to ignore the pain and suffering of several people who had lead healthful lives until these were sidelined by what many sensed was a virus however, not enough funds were going into the search for a remedy. The book explores Autism and what might be the beginning of this disorder; For anyone wanting to learn how science can work for us or against us, this is essential read; The medical market profits from chronic illness, not in curing it..!! Carol Fisch, Retired Microbiology & Stealth Pathogen Study Background. A DEMAND Openness and Honesty In Scientific Research Not enough folks are questioning the current pandemic of emerging degenerative disease. Worthwhile bio-chemistry lab could do it? When I was a kid in the 50s, it was a rare one who was afflicted with allergy symptoms or a chronic disease. Animals fed L-lysine grow more muscle tissue and are less susceptible to attacks. Well.... this far-reaching plague of chronic disease is far from normal and we'd better amount out the complexities before the people becomes extinct. Could it be possible? Here is a estimate from Hillary Johnson who wrote Osler's Internet and the forward to "Plague". "Any collective memory of precisely how abruptly and aggressively this disease (Chronic Fatigue Syndrome or CFS) emerged in the late 1970s and early 1980s, especially in large coastal cities like ny, Boston, LA, and San Francisco, recedes with each moving year. Has it already?"Diet plan plays a definite role in determining our health. Assuming all the details are correct and undistorted, and as a fellow scientist each of them seemed convincing if you ask me, the implications of this work are staggering.. and... Bravo! However, the main one main area that's basically being overlooked is the function that microbes are playing in the world's fast deteriorating wellness. Our medical system will not concentrate on prevention or treatments (despite the claim of all disease charities). Do you know of ANY disease charity that has found an end to "their" disease? I haven't come across any. Subpoena the emails and internal files at the CDC. for those suffering from a Chronic difficult to diagnose and deal with disease this is a must go through. I can tell you a very important factor, if this story gets out, people will not be getting their kids vaccinated, or taking the flu shot.The new book "Plague" by Kent Heckenlively and Judy Mikovits might hold some of the answers to these crucial issues. This book describes how infections infect humans, how exactly to strengthen the disease fighting capability, and has treatment protocols utilizing the most potent natural antiviral natural herbs. Judy Mikovits was a respected and prominent molecular biologist who began her career

researching tumor. I commend her compassion and her die-hard persistence in assisting the people suffering from this devastating XMRV-like virus in the ME personally/CFS and Autism communities! XMRV in addition has been widely found in prostate malignancy. Mikovits describes what sort of stimulation to the disease fighting capability, from a vaccination will do it! You'll think there would be much conversation and research occurring so that an end to these chronic ailments could possibly be found and implemented. Use the internet, look up L-lysine on Wikipedia. Central to many, if not all of the problems is the fact that, like Marie Curie, the gifted scientist is undoubtedly a woman. The essential theme of the book "Plague" centers around Judy's discovery, her use of the chronic illness population, her job at the Whittemore Peterson Institute, her undeserved dismissal and arrest...and the discrediting of her important work. Cash, power and vested interests appear to have fueled these actions against Mikovits. People whom she trusted switched against her. Nevertheless, Mikovits will not be silenced, which explains why she and Kent wrote this groundbreaking publication. Increasing numbers of people will be standing beside her because they recognize the criminal activity taking place in your government health agencies, which are covertly funded by the drug companies. but it does not impact the readability for the average individual. It creates collagen, and is required to make connective cells. Was this intentional? Mikovits also wrote a paper detailing the reasons why her XMRV findings were not because of lab contamination. I was particularly thinking about one of Mikovits's research discoveries. This is an estimate from web page 172 and 173, which shares this discovery. " It's a straightforward retrovirus, this means its expression, the on and off switch, is controlled by simply --- and we've learned this --- it's unpublished data, by simply three things. The response to hormones and the response to inflammatory cytokines. It's called NF Kappa B element. I don't understand why not. Therefore do inflammatory events as caused by other pathogens. And so perform hormones like androgens and progesterone, which also seem sensible with regard to prostate malignancy." I found it extremely interesting that CFS Patients and Lyme disease sufferers (who also harbor the XMRV virus) often become weaker and sicker when subjected to tension (which releases cortisol, which turns on the virus). She determined and characterized the virus using a variety of techniques, including genetic analysis, antibody tests, chemical analysis, and even got an image of the virus budding out of a contaminated cell. This may be proof that CFS and "Chronic Lyme Disease" are not just a result of a "poor or malingering character", as some so-called professionals on CFS profess. It's really good scientific reading! Mikovits can be calling for even more honesty and openness in the scientific study community. How do we progress to find causes of the rapidly increasing amount of illnesses only if profitable study is allowed? Perform we need to privately fund experts to make sure we are able to investigate root causes rather than just researching to develop partial or false causes where just symptomatic treatments can be found? I've waited for this reserve for well over a year, I browse it in three days as I couldn't put it down!1. How could that happen?2. More genuine research is necessary into what turns XMRV on3. What if this happened back in the 1980's when the disease referred to as ME/CFS first appeared in the Lake Tahoe area? Doctors? This book needs to be widely read to increase awareness and interest in the XMRV virus. "Plague" contains some specialized information that I feel is necessary in order to get over the seriousness of the issue...The main argument of the scientific community...which formed the basis for the discrediting of Mikovits's work, was that other scientists cannot replicate her work and therefore it was falsely decided that her findings of XMRV in a lot of the chronic illness population, was because of lab contamination. This reserve contains all the components of suspense, corruption, betrayal,

fearlessness, and can be a definite page-turner. Let's all come together to aid Judy Mikovits in her quest for honesty and openness in scientific analysis. Our lives depend on science being implemented for actual human progress rather than only for profit. This admonition also holds true for the very people who are complicit in medical corruption. Plants have been developing chemicals to fight off invading organisms like viruses, bacteria, and fungi, for millions of years. Honesty is still alive and well! Great book and essential read. Critical information contained in this bind. This book is incredible! The moment I noticed a snippet concerning this scientist who supposedly was discredited and having papers retracted I believed I better hurry up and read this publication! Neither does Autism have a remedy or treatment.. This was riveting and useful. Who's liable here? Wow! so well crafted! You should also understand that sugar can disable our mannose binding lectins. Adhere to the leads. Autism is normally impressive one in fifty children in the US, now. What perform they perform at the Center for Disease Control? I can't believe all of the disease are related to the lab-pets and vaccine like that! These minerals are necessary for proper immune system function... causing cancers years later, and chronic fatigue syndromes... So, it is not one species of virus, it is many, carefully related, but continuously morphing, infections. Judy Mikovits' reserve "Plague" should be needed reading for all higher level Biology students, Health Sciences Majors, and Medical College learners..

Judy Mikovits. I found this reserve through the YouTube channel "The High Wire", where in fact the investigational journalist of vaccines had been so impressed with a lot more results in this reserve. I thought I knew a lot by following "Vaxxed" channel, but Oh, My! The Mouse Leukemia Virus, MLV infects the white bloodstream cells of mice, the "leukocytes", and causes them to replicate uncontrollable, causing a cancer called "Leukemia". Jaw dropping facts almost everywhere!! If we consider this as only kid's and their parent's problem, the we better wake up quickly, because this kind of Big-Pharma tack ticks are just about everywhere. As someone who has been mixed up in ME/CF, Lyme community and other illnesses that affect the Neuro- Endocrine System, I applaud her sacrifice in carrying out her best to obtain the Scientific Community to listen. As someone who watched what the HIV community went through in the early 80's. A must-read! This book is actually a how-to guide for industry PR(propaganda) departments on silencing any voice that goes public with inconvenient truths.. I'm not causing this to be stuff up. They expected her to silently fade into the background once they destroyed her career, her finances, her reputation. This is a chilling reminder that "science" that is bought and paid for by industry is ever permitted to serve its expert. I extremely recommend this book! -This XMRV (Xenotropic Murine Leukemia Virus-Related Virus) was "discovered" in 2006 as being associated with CFE when Mikovits found evidence of it in 67% of CFS/ME sufferers and 4% in healthful controls..they were wrong. Famous American virologist falsely imprisoned I started to read this book out of a spirit of general curiosity and quickly realised I had found a function of astonishing importance. Chemicals in the environment also factor in to the equation.... The structure of this book is actually the chronicle of a diligent and completed scientist struggling to defend a new idea of disease against a corrupt hierarchy of entrenched scientific, political and financial interests. Mikovits's research offers been minimized, discredited and essentially buried. Rather than wealthy. General readers could skip a few of the more descriptive technical sections to follow the story of her fake imprisonment without trial, and lack of professional reputation, goaded by sound-byte mass media following their own economic and political motives. Because this is a chronicle of actual events the structure of the reserve is a bit of a tangle because that's how everything actually occurred and there are a few scratchy grammatical errors that have escaped proof-

reading, but that's just a minor issue. So many exciting twists and turns. One such antiviral plant which Dr. Without Helper T-cells, a person can't battle off invading organisms and AIDS victims get all kinds of infections and rare cancers. If you are not really a science minded person, This is an extremely difficult book to read and understand. I recommend it for health care professionals and the general public. One chapter will relate history before events and the next will detail counted days spent in jail which I was to never fully comprehend why and how a respected analysis scientist got there in the first place. What I was able to glean from the many conference speech quotations of scientific jargon was a whole lot of political posturing and ego stroking in the study community and lots of power playing by those pulling the funding strings. Ask your queries, and search for the answers. Additionally it is needed to make the elastin in arteries and pores and skin. I sensed I had to help to keep notes in an effort to try to comprehend it all. Ultimately, as I stated before, it is certainly still not clear to me why Dr. Mikovits was blackballed from the scientific community apart from being truly a scapegoat of another person's or institution's ego powered lifestyle. So, what if something they produced, but couldn't see, while trying to create vaccines, like XMRV, escaped the laboratory, or Heaven forbid, experienced the vaccines, and was vaccinated into an incredible number of American children? Amazing Account of Vaccine-Derived Human DNA Contamination Rather than getting praised and lauded simply because a whistleblower of a general public health crisis, former CDC viral diseases chief Dr Mikovits was systematically destroyed simply by the powers-that-be, yet managed to survive and write this essential account. It includes some key points: -Chronic Fatigue Syndrome (CFS) impacts at least twenty million people worldwide and costs an estimated USD20B p.a. A insufficiency weakens the disease fighting capability and predisposes someone to infections. Both figures are distressing as hundreds of thousands are transporting the virus like a ticking time-bomb.. These were given an experimental polio vaccine made by Dr Maurice Brodie which was contaminated with a mouse retrovirus (via moving it through mouse brain tissue) which has now eternally retrotranscribed itself in to the human DNA pool. The above, in addition to basic virology principles are interlaced amongst the account of Judy's fake imprisonment, mock trial, and persecution by the "scientific community".
