. It had some good information, but a very different mindset from things like Michael Bunker's book *Surviving Off Off-Grid*. There is some good info in Rawles' book, such as for example how to purify water. He essentially admits this toward the end of the reserve, stating that a lot of people will never be in a position to live at their retreat because they can not (or will not?) leave their nice paying suburban jobs. Can't go wrong. Buy foods, buy many years worth of medication, buy three pairs of eyeglasses, buy nightvision gear, buy multiple vehicles powered by different fuels, buy a caterpillar dozer when you can. With that said, James Wesley, Rawles wrote a 300 page book targeted at relatively financially well-off urban and suburban people. Gardening is barely addressed, except for advice on growing wheat and other grains. But the overall mindset of this publication is buy, buy, purchase. Do not produce your very own goods forever and stockpiling, simply buy industrial goods together with your fiat money! The gun information in this book is good, but if one has already been a gun enthusiast they will already know much more than is briefly trained in this book. Seriously. Buy, and buy even more. This book is of no real value to working class people in rural areas and small towns. It is more of a toy than a serious prepping guide. I recommend. This book tells you to do everything, ABSOLUTELY EVERYTHING, except to at this time began a transition back to a sustainable agrarian lifestyle like our ancestors lived. Yes, there exists a crash arriving someday. American. I certainly love this book I absolutely love this publication. If you're a regular working person who wants to prepare yourself but also offers to survive in the meantime, this book will never be useful to you - go find a more practical guideline. Everyone even remotely interested in being ready for disaster/grid-down situations should read this reserve if for no additional reason than to possess your eyes opened up to the enormity of what it would actually try survive. However... HTSTEOTWAWKI is the first survival guidebook I purchased. The entire technique outlined in this book is far from the reach of the typical American citizen. Even though you reside in rural America, to program and prepare as completely as Mr. the books blasts you with concepts on things to purchase, big and little to be go through for once the SHTF. He recommends you buy gold (useless), an excellent big vault it is possible to lock yourself in, and a lot of guns and bullets, and night time eyesight goggles, and that you own several vehicles, among them at least 1 diesel car, a single diesel tractor, plus maybe a propane vehicle, a E85 automobile, an upgraded electric golfing cart, a motor cycle, and a horse. Wish this publication was better. This reserve is for wealthy suburbanites who are willing to risk everything by staying at their corporate jobs as long as they are able to, before ideally exiting post-collapse to live a country life that they are unaccustomed to, beside neighbors that they don't even know. I actually was disappointed in this reserve. This is a mixed bag. It presupposes you have lots of money to invest on prepping, and After all a lot. It makes some stupid suggestions like, while you are waiting for the TEOTWAWKI, move to the country and also have a work from home business fixing Dvd movie players (right now defunct), or weaving, or spinning, or candle and soap producing, broom or basket producing. I feel like We wasted my money on this. Therefore, as good as the information is, it isn't really practical in most folks which, in then, will only leave you feeling overwhelmed and depressed. I gave the book 2 stars rather than 1 because I thought the book was well written and interesting. Not Useful IF YOU DON'T Have got a Million Dollars and Want To Live In A Bunker This book is really impractical for the average person. It is concentrated 100% on creating a bunker type "retreat" in an exceedingly rural location and setting up military-style perimeters with 24/7 guard & surveillance etc. You'd require a tremendous amount of money to create this plan function - he recommends insane expenditures that 99% of individuals could by no means afford. It is interesting, insightful and filled with good practical advice on how to survive long-term in an

emergency scenario. On the positive side he does obtain you thinking about important things like sourcing drinking water, warmth, storing meals, getting elective medical procedures done, staying fit, taking care of your teeth, having extra prescription eyeglasses, learning how exactly to do stuff the old fashioned method now, so you are ready in a grid down situation, etc. Learned a lot about prepping. but he's an expert in the most extreme type of "preparedness". Packed with necessary information. I desire that it turned out titled something more such as "The Rich Man's Instruction To Building Your Bunker And Defending Your Perimeter" so that it was more apparent that was for extreme survivalists with a lot of money. Like any of those ideas are going to pay the home loan on all the gear he suggests you get. Good Good Be prepared! Be prepared! Most people have a plan, but fail to start to see the flaws of their own creations. I possess without doubt that his plans would work for somebody with unlimited period and resources, but it isn't useful for the average person by any stretch out. If one is already living in the united states and gardening and slicing firewood, and maybe even has lived in the country their entire lives (as I have), then this publication will be of hardly any value. Very helpful. Would buy again. Extremely thorough and was essential in creating a list of needed item for emergency. Bad idea. You won't be disappointed! Good browse; Great primer. Though I enjoyed this book and learned a great deal, this book really deals more with finding your prepping philosophy as opposed to the actual tools of prepping. There have been the right ideas on protection, sheltering-in-place and other methods, however in the end, that is more of a technique guide. If you are not used to prepping, curious or uncertain how to begin, then I highly suggest this publication to get you started. If you are searching for a sophisticated tactical manual/guide, that is too book addresses the broader scope of prepping. However, I would suggest this book to you as reality check. Awesome book An absolute must have book for everyone. Must have book This is an absolute must have book for anyone wanting to advance themselves in survival so many ideas for gear and equipment like deisel motorcylces that run on 8 different kinds of ..OF LOW QUALITY, If One HAS ALREADY BEEN A Country Boy and Agrarian Oriented Though I found this book years back at a gun show, I simply recently bought a copy. so many suggestions for gear and equipment like deisel motorcylces that operate on 8 different types of fuel. Rawles suggests, would cost around \$500k, (not including the actual price of the property itself), and essentially needs that preparing for stated disaster become your regular occupation. Love the Going Home series Love the Going Home series.. The author is definitely an expert and incredibly knowledgeable; Thank you A. No, urban prepping is not the answer.
