Will be okay with simply those three items? Home Defense Guide

When I trained disaster survival courses, I always told people, SHTF planning is not about just stockpiling meals, drinking water and securing a shelter. Best Disaster Prep & Well think about it, if you just need to take shelter and conceal for weekly, yes, then it really is fine to just have food, water, and a protected shelter. Next, I trained and demonstrated them what gears they want and how to utilize them the best way and third, I taught them how to proceed during and after a major disaster. Preparation Handbook

SHTF Prepping, Bug In, Bug Out, Stockpile & First, I taught and demonstrated what disaster preparation truly is, that is what I demonstrate in this book. Ideally, disaster preparation is a lot more than that, a true preparation would be where you find out several basic survival skills, master them, practice them and be pro at them. To be truly successful, you will need to have a comprehensive approach and look at the broader picture, and that is exactly what I have done in this publication. A genuine survivor is somebody who knows how exactly to survive in any situation and make the best away of it. A true survivor knows where to find food, drinking water, or shelter when there is none. A true survivor knows how to deal with any emergencies when there is absolutely no 911 service to call. Any book on this topic can show you how and what meals to stockpile, but is that is just a small part of survival schooling, a big part of that schooling is where you learn what skills you will need, and how exactly to learn and master such skills, what things to use, how to utilize them. Be Safe! Or would you need to have a few even more things to survive for the long term? But imagine if the disaster is truly a big and longer lasting one? These three books are essentially the notes I implemented when I trained "Disaster Survival," to 17 sets of people in 5 different countries effectively. In this Book You Will Learn and Master:

- 3 types of Disasters
- What and How exactly to Prep
- 7 Concepts of prepping
- 4 Layers of Prepping
- How to create a full evidence disaster Plan
- 7 Must Stick to tips for every planners
- 19 Disaster Prep blunders to Avoid
- Special Prepping Considerations
- How to Prep for the Elderly, children and house animals
- 5 Mush have Abilities to Find out
- 11 Survival Abilities to Master
- Disaster planning and Fitness
- How to get your home prepared and prepped
- What and how exactly to use a Faraday Cage
- What and how to Stockpile
- How to save money on Stockpile
- How to endure long term disaster and become self reliant
- The 80/20 Rule of Prepping
- 21 Free Disaster Planning Items
- Where and where to find inexpensive Gears
- SHTF Practice Drills for different scenarios

My disaster survival course was taught in 3 split segments.!

It may seem silly at first, but after reading the publication, I realized every little thing issues in a SHTF situation. Big disappointment. Never know what may come our way. You'll find nothing new here also for the first time reader of "prepping" material. I rather be prepared than sorry! Definitely not worth \$12.99. Top Advice You Wish You Won't Need! In this book the writer focuses on plenty of details which is what i liked. A waste of money. Besides the spelling and editorial mistakes, this reserve contains a whole lot of "what you should learn", no "how exactly to" information. Only a lot of general statements without resource information for further study.
