The Dementia Handbook: How to Provide Dementia Care in the home is the supportive information you've been searching for as you walk alongside your loved one on this difficult—but potentially rewarding—new route. People who have dementia or Alzheimer's experience emotional distress, that leads to behavioral problems and the necessity for institutional care. Judy Cornish understands this. Because the founder of the Dementia & Alzheimer's Wellbeing Network® (DAWN), Judy Cornish approaches dementia treatment with obvious and empathetic methods that not only enhance the lives of the people with dementia but also of those caring for them. Predicated on her findings, Cornish could develop options for caregivers to ease emotional distress, which can quickly and properly resolve behavioral complications. However, Cornish has recognized a pattern in the abilities and disabilities of people living with dementia. Dementia and Alzheimer's have become personal and individual experiences—they vary from individual to individual. Though people with dementia lose a feeling of self, they are still the same person you often loved. However, if family members and caregivers can identify the emotional requirements due to dementia and understand which skills are lost and which stay, they can lower the behavioral problems and their own stress. Providing dementia care can be profoundly stressful for families and caregivers.
