How to End the Autism Epidemic

[continue reading](#)

By refusing to engage with parents and other stakeholders in a meaningful method, our public health officials destroy the public trust and enable the suffering of countless kids and families. Then lays out, in detail, what the truth happens to be: new published technology links the aluminium adjuvant found in vaccines to immune activation occasions in the brains of infants, triggering autism; Handley presents a compelling, science-based explanation of what's evoking the autism epidemic, the lies that enable its perpetuation, and the guidelines we must take as parents and as a society in order to end it. Even though many parents have noticed the rhetoric that vaccines are safe and effective and that the technology can be settled about the relationship between vaccines and autism, few recognize that in the 1960s, American children received three vaccines compared to the thirty-eight they receive today. Today it's a single in thirty-six. Or that in the 1980s, the price of autism was one in ten thousand children. Or that whenever parents are informed that the chances of an adverse response are "one in a million," the odds are actually one in fifty. Parents, educators, and social program professionals around the united states are sounding an alarm that people are in the midst of a devastating public wellness crisis?one that corresponds in lockstep with an ever-growing vaccine plan. Why do our open public health officials won't investigate this correctly?or also acknowledge it? In *How to End the Autism Epidemic*, Handley confronts and dismantles the most common lies about vaccines and autism.B. While Handley's argument is certainly unsparing, his position is certainly eventually moderate and constructive: we must continue to investigate the safety of vaccines, we must adopt a position of educated consent, and every individual vaccine should be considered on its own merits. and there's a obvious legal basis for the statement that vaccines trigger autism, including previously undisclosed depositions of prominent autism scientists under oath. This matter is definately not settled.In *How to End the Autism Epidemic*, Generation Rescue's co-founder J.

D. Dr. I have found them to be among the most courageous, inspiring, and motivated parents I have ever encountered in my 47-year career. Along the way of becoming educated about environmental causes of various chronic health problems that are common within an integrative medicine practice, always searching for pathways to correct underlying causal pathologies, I've gone through some 18 books about vaccines and about biomedical treatments for autism. D. I have been learning the autism epidemic and the vaccine controversy for over 5 years today. It would more accurately be referred to as Uninformed Coercion. These comments aren't designed to claim or imply that vaccines are "the" cause of autism, nor that children shouldn't receive vaccines at all – but rather that there surely is a dire and pressing need to learn more on the subject of vaccine effectiveness and safety, and especially that educated consent and the related problem of parental choice on the subject of whether or not the youngster receives recommended vaccines must be modified. But it most certainly did give me plenty of new info arranged in an apparent and concise manner. If, however, you have approved the "vaccines do not trigger autism" sector sponsored disinformation and you also do not desire to challenge yourself with the truth you need to avoid this book like the plague. In the end, the Hippocratic oath dictates "Primum non nocere" (1st do no harm), and awards to family members for vaccine adverse events through the VAERS program and the "Vaccine Courtroom" since 1986 possess surpassed \$3.7 billion - in a system that is expensive, arduous for families to get around, and stacked against petitioners. The US Supreme Court ruling in 2011 supporting vaccine manufacturers' exemption from any liability for vaccine damages, because vaccines are "unavoidably unsafe" (Bruesewitz v. Wyeth, 2011). Very well written and informative. We urge all parents or parents-to-be, and also fellow pediatricians and various other health care professionals who administer vaccines, to read this book, in addition to Dr. Thomas' above-referenced work. Most of us owe J. This book, by a parent of an autistic kid, and another recent publication by pediatrician Paul Thomas, The Vaccine Friendly Strategy (2017), have led me to reconsider much of what I have been taught and read within the section of vaccine effectiveness, protection, and especially about Informed Consent – a long-kept foundational precept in neuro-scientific medicine. Handley the thanks to at least reading and taking into consideration what his remarkable synthesis of released and credible proof shows. It would be unexpected to know less than 1% of vaccine adverse effects are reported. With a 42-yr professional pediatric history and after about 7 years of intensive study of the research behind vaccines, autism, and their connection or absence thereof, I discover the author's reasoning and the resources he cites to end up being extraordinarily well conceived and credible. Thomas, for providing parents of kids and us experts who work with them indispensable resources to make intelligent decisions about vaccines in a manner that holds true Informed Consent. His sources nevertheless are of the best credibility and his line of reasoning irrefutable. Two oft-repeated statements made by parents and experts alike who summarily dismiss the idea that vaccines aren't "safe and sound and effective" in the unqualified feeling are: • Vaccines have already been proven not to cause autism. • The research is settled. I plan to recommend both of these books to all or any parents and professionals who inquire about assets to be more informed. If you want to endanger your own kids and the lives of others, following suggestions in this profiteering pile of rubbish is an excellent way to start out. Eroding confidence and trust in vaccines among both groups can only end up being repaired through honest, respectful dialogue and following some of the recommendations advanced by Mr. Handley. Dr. They provide wish that the exponential increase in the incidence of autism to 1 in 32 kids (CDC Fall, 2017) can be rolled back again to past significantly lower levels later on. Thank you, Mr. Vaccines do cause autism. Acquired I not previously read about most of the lines of research and evidence he cites, I'd have discovered his conclusions shocking to the idea of outright dismissal. The writer virtually destroys each of these arguments in a fashion that requires one to suspend rationality to continue to believe they are true. Samuel D. Ravenel, M.D. Pediatrician Applauds Challenging and Gripping Book I actually am a pediatrician with a profession including private pediatric practice for 31 years, 11 years simply because a major university Division of Pediatrics Clinical Associate Professor of Pediatrics in a community pediatric residency training curriculum, and most recently, 5 years practicing pediatric integrative medication. F. This issue is of staggering and rapidly expanding importance. A.P. Robin Hood Integrative Health Winston Salem, North Carolina September 20, 2018 Epic Mic Drop Just when you think you know all generally there is to know approximately the rise in Autism diagnoses, the underlying issues behind it, the politics of the Vaccine courtroom, and what's approaching – JB Handley comes out with a reserve that turns

your knowledge on its head. Guide to self damage and child abuse. Full recommendation, I'm investing in a second one for my pediatrician who admittedly doesn't do "bench" analysis and only does what AAP says to accomplish. I normally steer away from this type of book because it causes overload. JB's sentence in the introduction is really his purpose for the reserve;#readthebook Very informative, helps explain my adverse reaction to HPV vaccines Very well written book that helped me understand why the HPV vaccines activated dormant Lyme Disease and co-infections in my body, triggering my own body to turn off and go haywire for some of my 20's. Which means that when Americans (through their insurance costs) pay the 75-cent tax on every vaccine component (as in, the MMR is taxed as \$2. Two of the world's top autism doctors admit that vaccines can and do cause autism When two of the top Johns Hopkins autism doctors admit in depositions that 30% of autistic cases could have been prevented had someone tested a kid for mitochondrial dysfunction just before giving them the 12-18 month vaccines, the vaccine industry understands it's in big trouble. America's Vaccine Damage Compensation program (what, you didn't understand we couldn't sue vaccine manufacturers for hurting our kids?) offers known for at least a decade that these children have got chronic low level infections because their cells can't produce more than enough energy to overcome sickness. When I bought this book I wasn't sure it could tell me anything brand-new. This book shines a light on those lies that we maintain hearing, and anyone who reads it with even a sliver of an open mind will come from its reading with a considerably broader knowledge of how we surely got to this situation and what we have to do to move on.²⁵), instead of going to pay out the medical bills of kids human brain damaged by the MMR, they are paying for the vaccine court to commit fraud on the parents of vaccine injured children. I wouldn't recommend investing in a copy of this publication. I'd recommend buying many copies and giving them to your doctors, your very best friends, as well as your siblings. Everyone needs to browse this! Handley, and Dr. It is NOT contrary to their data. Lawyer: Your opinion is unlike, tell you, the opinion of the cdc, correct? Over these past 5 years I have worked with a large number of children who've autism and making use of their parents. Kelley: It really is contrary to their conclusion. It isn't unlike their data. This testimony sums up the book and it's importance. These two books together offer a roadmap for enhancing vaccine safety and a wealth of concepts for how both parents and we professionals can begin to reduce the dangers inherent in vaccines. Richard Kelley is a Johns Hopkins professor of pediatrics (Kennedy Krieger Institute) who offers testified numerous times on behalf of the US government. He's not the fringe, he's the very best of mainstream medicine about them, and he's stating that although CDC statements vaccines cannot cause autism, their very own data says in any other case. A beautifully condensed source for citations and information. From the testimony of the doctors to the deposition of Plotkin himself to the research that show just how vaccines can result in autism in susceptible kids- this book is world changing for those who actually care enough to investigate it. For those brave enough to learn beyond the inflammatory headlines and trolling commentary, you will learn WHY it's occurring and How exactly to address this epidemic. "I know that autism can be preventable and recoverable, but we'll never end this epidemic until we reckon with the lies and obfuscation that enable it". Doctors will not give you these details because they are not taught it! A great deal to ignore It really is incredibly detailed, informative and thorough. It really is riveting, and from a person who lives it day in and day trip, that's huge. People, this is BIG. I was presented with the opportunity to read a review duplicate of 'How to get rid of the Autism Epidemic' a couple weeks ago, and I spent labor day time doing that. The prevailing cultural tendency to label any parent, or even healthcare professional, who issues vaccine safety or effectiveness as "anti-vaccine" and frequently repeating the aforementioned two unsupportable assertions, must end. Wonderfully Fair Description of One of the Major Causes of Autism This book is well crafted, well referenced, and logically presented. If you are genuinely thinking about protecting your small children from at least one of the primary causes of autism then I highly recommend that you go through this reserve.A." Even more so, it's been troubling to realize that we as an occupation have failed to provide our sufferers true informed consent about vaccines. This is actually the book to get rid of the debate. Everyone needs to browse this. Wyeth LLC) is normally prescient. Great Great read. When you have been researching vaccine safety this is a must have. The epidemiological studies conducted by the CDC previously about vaccines and autism was terribly designed and just examined one ingredient in one vaccine (Thimerosal in MMR vaccine). Vaccines aren't tested using a double blind placebo-controlled process that is anticipated of pharmaceutical medications. When vaccines are tested using a terribly

designed experimental trials the participants aren't observed over years that is expected of pharmaceutical medications. Moreover, vaccine trials never test giving multiple vaccines at the same time to the participants that is what happens in real life. The CDC and many vaccine advocacy organizations including the mainstream media get funding from vaccine producers. Congress provided the vaccine sector immunity from all lawsuits. I find the information he shares to end up being compelling, albeit oftentimes quite disturbing. Amazing New Information - ESSENTIAL Read The vaccine program is horribly mismanaged. One author of the CDC study is normally a criminal fugitive sought by the federal government while another author became a whistle blower and submitted proof to congress that the CDC involved in fraud in its research. The vaccine industry prevented many congressional hearings on the problem. Best book in autism! In fact, both of these books together, alongside prior exhaustive study of relevant scientific content and additional books on both sides of the issue have got led me to the conclusion that standard practice of information supplied to parents of kids about the vaccines which are recommended fails to qualify as Informed Consent. And the immune activation event to getting those 12-18 month vaccines sends them off a brain damage cliff that they are not returning from. It's been even more than eye-opening to comprehend that vaccines aren't, in the unqualified feeling, "secure and effective. The reserve showed connections I experienced never had the opportunity to draw together on my own. J.B. Handley pulls jointly all the pertinent scientific study from around the globe looking into the cause of autism. The study points undeniably at ingredients in vaccines as the major cause of autism. He also goes on to explain how exactly we can get at night mistakes of doctors and pharmaceutical companies in order to heal our children.
