in-laws is normally a nurse and stated this was an excellent book to have on hand. My brother-in-law is a nurse and said this is a good book to have on hand. Great to have readily available. Excited to read this and apply in the event that needed. Bought for me. Child, 13, loves it and . ? I am thus excited to start to see the new publication. I'm a higher School Biology teacher and plan on using among the pop quizzes about the center with my college students! Hubbard, and, although I have several medical books, and even one called "What to Do When THERE IS ABSOLUTELY NO Doctor" (which really focuses more on medication in remote places), I found them lacking. Personally I think like this will 100% can be found in handy for just about any future emergencies we've. What I especially like concerning this new book is the practical approach, using clinical evaluation in the lack of diagnostic testing, to determine the issue. I am seeing doctors today who seem to lack clinical evaluation skills (or just don't use them). Bought for me son, 13, loves it and references it often. Another essential point is that Dr..! I might add that, despite my considerable experience in managing injury and critical disease, I learned much out of this new book! I also just like the visual helps and myth alert components, which have become helpful. ... This reserve I'd give as something special to a friend. There is some extremely solid and practical life saving instructions in this book. Nevertheless, I was expecting even more in depth advice. On multiple occasions the tip is "take the person to the medical center. The author discusses products and home remedies. A MUST for each and every Bug Out Bag. This is a great resource to use in emergencies; kind of like a well written, easy to read First-aid manual. There are thoughtful ideas for choice natural medicines whenever a pharmacy isn't available." Isn't the idea of the book that professional medical help is not an option? There are selections for remedies, depending on your situation. An absolute must have for everyone. Loved it! I have some knowledge. I have liked the "Duct Tape 911" reserve by Dr. Great for General Protection and SHFT Prep. This is clear to comprehend and divided by what's needed, preferred items and appropriate substitutes. I have been a nurse operating ER and Vital Care Units (among the areas) over an interval of 46 years, that will be why I find so much lacking from the other medical type books I have. We likewise have the pocket first aid book as well that I continue me in my backpack all the time. Super book on how best to get by when there's . Hubbard gives practical suggestions but recognizes that some circumstances really, really need a health care provider, and he makes the suggestion when it is indicated.. Super book on how best to get by when there is no telephone, no EMT, no hospital. Hope I don't see that but if..!.. This reserve is fun to learn and amazing! Buy this book. Dr. Hubbard has considered almost everything (short of surgery, needless to say) in this book. I feel like the topics covered in this publication are what Paramedics need to find out and recall every day. Five Stars. This is an absolute must have book for those that plan ahead for times when we are on our own. Good instructions...A comprehensive and practical method of survival medicine... This publication is fairly comprehensive addressing many circumstances not mentioned in various other such books. Four Stars like it. Three Stars. It does supply the fundamentals which are valuable. The drawings are clear to see.. Well worth the read. Excellent - interesting yet in simple language and with details which could be very essential.. Thank you.
