**Spiritual Meals for Challenging Situations Grounded in Science** This book is spiritual food for anybody going through trauma. While there are lots of such accounts, none have captured the fine detail and the occurrences leading up to her recovery with such spectacular perception. I would suggest this book to anyone considering serious surgery or procedures. This experience is a moving accounts that grabs the reader quickly and techniques the story as an excellent page turner should. It gets the "band of truth." One person's way forwards, against life's supreme adversity. There is the ring of truth about this publication. For myself, it had been like the author's own personal invitation, to walk by her part and observe, as she passed through an unexpected confrontation with her very own mortality, and made her in the past once again. She comes face-to-face with her own mortality and shares personal experiences in her life and upbringing and their effect on her beliefs. It had been a book about a personal inner journey, of a certain conquest of self, about a certain inner battle, fought at the edge of the chasm of the author's then apparently imminent death. That is a book that should be in the waiting around room of every doctor and therapist, wherever people must face life changing trauma, apparently beyond their own control. Perry has inherited the precision of her father and the artistic ability to deliver a compelling tale from her mother. Five Stars ENJOYED THE READ

A fantastic read of the author's personal journey during an acute ... A fantastic read of the author's personal journey during an acute lifestyle threatening medical illness and recovery. Five Stars Loved this book! Unlike a great many other "near loss of life accounts," this recounting was written from the perspective of a scientific observer, and did not ask for my "belief" in anything, other than the virtue of individual courage. Along this journey, she questions some of the beliefs she had prior to this traumatic experience. A very interesting read for anybody experiencing an acute lifestyle threatening medical scenario or a enjoyed one's medical crisis. She was blessed to possess so very much support from her family members, close friends, pastor, and caring medical staff and recognizes the significance this had in her recovery. Riveting A riveting account, told in the 1st person, present tense, of 1 woman's connection with pain, uncertainty, and possible death. Perry's accounts of her close encounter with death is truly riveting. Once you begin reading this book, you will need to examine it in its entirety without putting it down. The writer is a scientific psychologist who was simply very experienced treating individuals, and little knowledge being the patient. Made me enjoy my life even more and thankful for what I have. Highly recommend.
