Goldberg and his co-workers illustrate why autism cannot be genetic, but is an indicator of a treatable neurological disease that attacks the brain. But in the annals of our society there's never been an "epidemic" of any developmental or genetic disorder; and how do we end it? but are in fact variations on the same thing: neuro-immune dysfunction syndromes (NIDS), and what that you can do to transform your own existence or the lives of your loved ones. autism, "it is scientifically impossible. Dr. Industry experts agree that America is amid a disturbing epidemic of what offers so far been diagnosed as autism's disease fighting capability. Goldberg. In only thirty years autism diagnoses have got risen from 1 in 5,000 kids to at least one 1 in 110, according to the Centers for Disease Control and Avoidance. Just what exactly is this mysterious affliction known as "Dr. Goldberg's understanding base is greater than anyone else's in this treatment area. He is the best professional in this field, for me. I could have taken my child to any autism doctor on the planet and I chose Dr. Readers will come to understand that Autism is not psychological or developmental, but a medical disease, Autism is the effect of a dysfunction in the neuro-immune system and frequently by secondary neurotropic viruses that impact the neuro-immune system and brains, illnesses such as autism, ADD/ADHD, and chronic exhaustion syndrome all possess different " --Bruce L. Russell, MD, FAAFP

I would recommend the book for anybody who has a child with . It's amazing what he is showing us he knows. This is directed at children who develop autistic symptoms after . Goldberg: ""Phenotypes" - a potential medical route for many with ASD "symptoms. I believe he's a miracle worker. Here are some of the highlights from today:*Center time is a joy right now. Too many kids are being misdiagnosed!... The way the language is flowing all day long. That was unclear to me when I purchased the book, and irrelevant for my boy. There is true hope! NIDS includes the many variants of ADHD and additional "Labels" such as for example OCD, severe anxiety, and other cognitive disorders in children. That gift was the "come back" of our 5 yr previous grandson Eli, who was simply taken from us at age two by an "disease" and provided the label AUTISTIC. That gift was delivered by a caring Pediatrician, Michael J. Goldberg MD. For the past three years Eli has been put through intense therapies including, Applied Behavior Analysis (ABA), speech and occupational therapies at a cost of around \$50,000 per year with reduced success. His diagnosing psychologist noticed him recently and said that he's just like a completely typical precocious 4 yr old now! There's Real Hope This book is crucial read for anybody with a child on the ASD spectrum.. There is no interaction with various other children at the recreation area. In order to provide socialization my daughter Amy enrolled Eli in a private Pre K- K learning center. Goldberg during the last 20+ years has discovered that around 90% of the "autistic" children he sees, check positive for a virus that affects the brain leading to the manifestation of autistic like symptoms and behaviors. She had no unique needs children no knowledge with an autistic kid. Amy convinced her to consider Eli on a trial basis provided his ABA aide was present at all times to control him. Eli would enter the course and immediately go to the toy package, lie on the floor and check out hoard the toys. I find myself likely to work in the morning wondering what improvement we will see for that time. Goldberg clarifies how autism is usually a treatable disease that episodes the brain's disease fighting capability. I have been teaching for 30 years and also have hardly ever witnessed anything like today! Golberg's book 10 at a time and give them away. Goldberg MD, a pediatrician in Tarzana CA. "For more information about Dr. The teacher a former 20yr public college kindergarten teacher (the one everyone wanted because of their child) opened the training center to give typical children a mind start before they went into 1st grade. Dr. Julie After 90 days of following Dr. The only real charge was for an workplace go to and a prescription for an anti-viral medication stuffed at a Walgreens. Goldberg is definitely of the opinion these children's immune systems are unable to successfully thwart the virus because the allergies tension the disease fighting capability. He has/is successfully treating these children and teens, including my 5yr older grandson Eli with anti-viral and anti-fungal medications. In addition Eli's diet plan has been altered to eliminate food items with known allergenic properties that can stress the immune system. Eli started his anti-viral medication on a Fri. This child was so excited to tell me that "Eli used his own words! Yet, scientifically, an epidemic cannot be to credited a developmental or genetic disorder; On Saturday (seven days after starting the medicine) Amy was producing breakfast and heard a tone of voice say, "Hi Mother". She turned considering it had been her older son. I for one have become a much more critical consumer specifically where my boy is involved and today research things on my own to become self-educated before I trust a doctor's suggestion for my kid. This was the first period he previously ever said that. Her husband Josh, asked. Today I LOVED seeing him state, "CHEESE" whenever we took the attached pictures, hearing him sing melody after music, watching him call the names of each classmate to line up, having him proudly show me the reindeer he made at centers, watching him play chase with the youngsters at recess and seeing him smile more than ever." Below are two email messages from Julie, Eli's teacher. "Date: Fri, 7 Dec 2012 15:34:49 -0700 Subject: STRATEGY TO USE, ELI Amy and Josh, It is times like today that produce teaching even more rewarding than

ever before! Goldberg head to [. The aide would lead him to a rack to hang his back pack and sit a table with the other kids. 'Where did which come from? Enjoy your weekend with Eli and observing all of the adjustments that excite people! The attached pictures document only a portion of his achievement today. I can't wait to see what Monday brings!

Julie""Time: Tue, 18 Dec 2012 17:19:51 -0700Subject: ELIAmy and Josh,While a instructor, today was among those days you dream of in theory, but are not sure it will really happen. I was so emotional by enough time Eli's time ended. On the playground he would stay by himself against the fence or dig in the sand container. Amy, as I spoke with you on the phone last night, I was so excited. It had been hard to believe after that, that today could possess topped yesterday. Goldberg's assertions to ring true with my very own experiences in the field of working with children with autism. As I pointed out, now that Eli is beginning to interact appropriately along with his peers, the reinforcement and encouragement from the children provides another positive dimension. I recommend the book for anyone who has a kid with autism or suspected autism. My 4 yr old son has lost 90% of his asd symptoms while becoming with Dr Goldberg for the last 7 weeks.. I am today on my 4th group of 10. I can tell he's becoming more attached to Dawn too.

Artwork DeBoltLos Alamitos, CA Insightful and fascinating I'm a child psychologist and also have been for the past 15 years and found this publication and Dr.*Recess is amazing! We begin by having him contact the brands of the kids to line-up. That is purely my opinion, and is situated solely upon my encounters to date as there appear to be many more children with autistic-like tendencies in a classroom versus also 15-20 years back. Outside he looks therefore happy, runs with his peers, appears interested when peers initiate contact with him, uses plenty of language, comes in willingly and walks in the range appropriately. One of the girls in my own class shared a story with me of an encounter she experienced on the playground with Eli.

Classmate: What are doing, Eli?Eli: We am making a castle. On Mon through Thursday the instructor commented he was increasingly more concentrated and his behavior was enhancing. Book is a joke and not well written. I got teared up often. What all the staff continues to repeat daily can be:1. How actually different Eli looks2. How happy he seems3. This is fond of children who develop autistic symptoms after a normal start in life. The phrases are turning into sentences and his words are his own. Goldberg has worked miracles as far as I'm concerned.As We study my terms, it still can't truly express the difference I am seeing! I can't imagine what tomorrow provides. I really feel that I am witnessing a miracle each day. Just what a happy, lovable small boy provides been inside that body! I can't think of an improved gift this holidays!. Goldberg has also discovered a very raised percentage of the "autistic" children likewise have allergies. Goldberg's protocol the outcomes in Eli have already been nothing short of a miracle. No tantrums, head banging, screaming; he is a bright eyed, alert to his surroundings inquisitive small boy. His speech therapist said, "This is not the Eli I have already been working with for two years". He operates if you ask me, says "Hi Papa" and provides me a hug. He tells his father "Bye, see you later on" when he leaves for function. Goldberg so if you want to listen to the interview, check out my blog at: [. He is interacting with other children appropriately, engaging them and initiating play. Eli is working psycho-socially at about a 3 yr age level and is currently beginning to catch-up.I accompanied my child and son-in-rules to the 1st appointment (two hours) to ensure Dr. Goldberg had not been some "snake oil offering charlatan" trying to take advantage of vulnerable parents. What I came across was a caring pediatrician, who with a blood test discovered a virus in Eli that triggers autistic like symptoms and behaviors. Dr. Based on my own reading and learning, Dr. Goldberg said, "With 1 of 88 kids becoming diagnosed as "Autistic" we have been in the middle of an epidemic. On Friday the teacher called Amy from the classroom and said Eli had overlooked the toys walked in hung up his back pack and sat at desk with all of those other children.I've offered it

to multiple school nurses and parents and colleagues. Dr. I am thrilled beyond words at how well Eli did today.. Nobody refutes what is offered.] AND go through his publication "The Myth of Autism" for complete information on his strategy and treatment of the MEDICAL epidemic. Today he put her chair near his and asked her to sit down at the centers with him. I am beginning to realize that you can find no limits from what the day provides! My very own son has suffered from an immune dysfunction and as a result I've become much more educated on the immune system, allergy symptoms, etc.As Dr. Goldberg's hypotheses make a whole lot of sense with regards to the complicated interactions among numerous areas of the body, and how these interactions can wreak havoc on specific individuals that may be compromised in some way. This does not connect with the population most importantly, but goes beyond other theories on autism that cannot/do not take into account the exponentially growing numbers of individuals identified as having autism.Unofficially, I can also offer two additional observations that I've made over the course of my career thus far. Although I entered this field with without any experience or pre-conceived notions about autism (since I understood nothing about it initially), I've observed that there appears to be a great deal of overlap among kids with several disorders including autism, OCD, ADHD, learning disabilities, and allergies. The correlation among many of these is known unofficially by many although generally overlooked in the literature. But, it was recommended to me by friends from both the medical and insurance sectors. students finished assessments on children. Pseudoscientific nonsense Dresdful unscientific non-sense from a pediatrician who's a self proclaimed expert with off the beaten track theories that do genuine injury to children and their families.. It's very rare that I observe learning disabilities without allergy symptoms; I'm not sure about the converse because the only children described me for assessments typically already have learning issues of some sort.The second observation I can make is that there are various, many people who have autistic tendencies but who do not meet up with the formal criteria for autism. The reason why this is salient is certainly that if the population with autistic tendencies had been counted, the total number of known instances with autism would obviously skyrocket greater than even what it really is now. I concur that even in my short career parents, educators, and specialists tend to be more educated and able to recognize autism, however, I do not really believe this alone makes up about the significant increase in identified cases. He is starting to state a name or two on his own. This is disturbing to me, both as a professional and a mother, and what concerns me many is we still don't know what's contributing to this boost. In his book, he explains the protocol that he so effectively uses and explains how diet plays a vital role in managing this disease. Goldberg's hypotheses do match what we realize about our culture and our diet plan, etc. To end up being conservative, Let me at least see research conducted that either facilitates or refutes his hypotheses. It's interesting if you ask me that many of the Europe do not introduce brand-new medications to their citizens until they're proven safe;Probably the most compelling and fascinating results reported in this book are that mind scans showed actual, documentable, and observable changes in brain functioning following appropriate treatment. This intrigued me more than enough to analyze Dr. The doctor must review the new proof the last 25 years in fact it is clear that it is primarily caused by the electromagnet presence. All in all, I believe our society's tendency to presume innocence until proved guilty is effective in the criminal justice program but in the health care industry is similar to playing Russian Roulette with this children. Until that is done, it will be impossible to know for several, though these are the best theories I've heard to date. conversely in America we have a tendency to fast-track the FDA approval process and the meds. Also arrived in with web pages torn. It had been Eli. Book is a tale and not well written. I'm so thankful to Dr. Goldberg! I was very lucky to have found Dr. Goldberg many years ago when my son was initially diagnosed with autism and not much was

known about the disease. When kids do not improve on his unique and exotic routine, he blames the parents for noncompliance. He also is discovering methods to express what he requires, when he does not have the precise words. I am so happy that he published his book, because it provides parents and teachers so much valuable information therefore much wish for our kids. In his publication, Dr. His attention period was about 2-3 mins and then back again to the toys, before next task. His theory clarifies why autism isn't a developmental disorder, but rather a medical condition that is treatable. As a mother or father of a child with autism and a special education teacher, I have to say that this is among the best books on autism that I have ever browse. Dr. It's essential read for anyone thinking about learning even more about autism, chronic fatigue syndrome, ADD and additional immune system dysfunctions. I had the enjoyment of interviewing Dr. For the very first time in 24 months Eli and his family went to a "sit down" restaurant...]

Dorothea Carney Likely your very best hope at losing an Autism diagnosis I was just mailing someone the link to the book and We realized that I hardly ever did a review! He works HARD with Dawn (his aide). His expressive vocabulary consisted of a couple of phrase phrases. I am a very science minded specific and the research behind Dr Goldberg's protocol makes complete sense to me. We do stick to diet 100% which is essential. I typically do not trust doctors but I completely trust Dr Goldberg now. He in addition has been patient around and answered all our questions. The man is quite passionate so he gets thrilled at times but this is a good thing. Previously we noticed a favorite MAPS dr for over a year with some improvement but lots of frightening downs. My boy has been so steady under Dr Goldberg's care with constant improvements. His iep group recommended that he be totally mainstreamed in the fall for transitional kindergarten (TK). No aid or accommodations! After getting a few years of experience under my belt, I can verify this pattern. The "research" he proclaims is far from mainstream. Dr. Percious . . . CORRECTING THE HYPOTHESIS: It is IS EMF NOT A VIRUS The viral hypothesis isn't supported. Autism can be epigenetic disorder which makes it cause by specific gene changes or deletions. The quick rise in the past 15 years of Autism is due to environmental . Goldberg's other works online and I've subsequently listened online to several presentations he's given, which helped further my knowledge of his theory. Tantrums, outbursts of screaming and additional autistic like behaviors had been daily occurrences. My grandson has been a patient of Dr. Goldberg for three years. ALL of his "autistic" like behaviors and mannerisms are either eliminated or hardly noticeable. After 6 months his speech therapist stated "this is simply not the same kid I have already been seeing going back 3 yrs. I purchase Dr. On November 2, 2012 Eli's life and the life span of his family was changed with a stop by at Michael J. Additionally it is a wonderful time for his language to be developed. Here is an article by Dr. This book is written by a doctor who has been treating my granddaughter." "Phenotypes" - a pathway to new medical treatments and understanding for ASD mannerisms and behaviors. When coining the idea of NIDS (Neuro Immune Dysfunction Syndrome), it had been NOT just another name for "Autism," (as mistakenly being used by some). NIDS is usually a unifying overview to put a medical etiology and idea of a medical/disease causation, on previously developmental/psychological labels of Autism and more. Us has received the very best Christmas gift. it was recommended to me by friends from both medical and . On Sunday my daughter noticed he had slept the night.. I have not yet browse the entire text message. When I was in graduate college in the mid-to past due 90's, a reputable and well-respected professor informed my course "off the record" that although there is no "known" connection between allergy symptoms and learning disabilities, she experienced noticed this correlation repeatedly in the clinic where grad. Hmmm. It's so common, actually, that if a child is described me with learning issues, I'll ask the mother or father about allergies even though they are not indicated on the background... it could only be the effect of a disease process.. Journeys to the

park consisted of Eli seated in the sand container digging holes or making a "Volcano" (mound) in the sand." What do you think tomorrow provides?.. My only regret is not being so critical within my son's first couple of years of life. are considered safe until they are proven dangerous."The youngsters are celebrating his progress and are ecstatic with each accomplishment! Also came in with webpages torn.
