Adorable book that leaves more to be desired This is a delightful book of photographs of dogs that attempts to utilize them to illustrate the many experiences of people on the ADHD spectrum. Having said that, I think there may be area for improvement; Both parents and students enjoyed the pictures and the great comparisons. With the cat reserve, I easily caught on to the parallels between humans with Asperger's and the normal ways of becoming of our feline friends. I was wishing that I would similarly leave from the dog book understanding canines better through the lens of ADHD, but that didn't happen for me personally. At the end of the book, at the end of viewing the many adorable photographs in it of young puppies and adult canines, and reading the written text that provided me nothing I didn't already know about the human being side of ADHD, I find myself wearing a crooked headed "baffled dog look" on my own human face, still wondering about the generalized statement, "All canines have ADHD", still wanting to know why that generalization is manufactured, what it might be about canines and ADHD that would parallel each other?. .. My daughter loves for me to read this to her because she pertains to most of the text messages... Puts things into phrases they are able to understand and relate with. highly recommend. I'd like her to understand it but not view it in a negative light. I read it again and again whenever I come across it. It's ideal for parents as well. This was recommended by my son's doc This is recommended by my son's doc, and for a kid that is struggling socially, it may be a comfort.
