Ideal for advanced undergraduate and introductory graduate courses, the text is along with a website with supplementary materials for learners and instructors, including chapter outlines, topics to think about before reading, glossaries, and suggested readings. Since its preliminary publication, the key purpose of the written text has been to furnish inclusive developmental perspectives on all substantive areas in psychology?neuroscience, perception, cognition, vocabulary, emotion, and social interaction. Some chapters in this edition are new, and those carried forward from the sixth edition have been extensively revised. In this Seventh Edition, Marc H. Bornstein and Michael E. Lamb once again invite international professionals to prepare original, extensive, and topical remedies of the major areas of developmental research, which are masterfully woven into a single coherent quantity. This edition is not any exception, as it continues to underscore the powerful and exciting position of contemporary developmental research. This volume represents faithfully the current status of scholarly initiatives in all respects of developmental technology. Developmental Science: An Advanced Textbook is the most satisfactory and cutting-edge introduction to the field on the market.
