This will be an invaluable and enlightening book for ABA practitioners and other professionals supporting people who have intellectual disabilities caused by a specific genetic syndrome from age 3 to young adult, providing the missing link between ABA and the role that genetics can play in accurate assessment and intervention. The reserve also contains general sections on genetic intellectual disability syndromes and an explanation of ABA methodology. Six different genetic syndromes are protected in detail, ranging from Angelman syndrome to Williams syndrome. With professional advice and clear guidelines, it shows just how to go about incorporating syndrome knowledge into ABA practice and begin treating children with particular genetic syndromes better. This ground-breaking resource demonstrates how genetic knowledge can influence our understanding of a child's behaviour and therefore inform their behavioural support plan.
