This book ought to be read by everyone with a sufficient reading level to understand its information. If the general public (and our politicians and physicians) knew all of the research that is referenced in this reserve, there will be a federal regulation preventing any state or school from requiring Anybody, child or student from being vaccinated. I only wish that in addition to this book, everyone would watch the two 2 documentaries, VAXXED and 50 Cents a dosage. Profound. It is very sad that good sense is gone and folks toss conspiracy arrows at well researched factual details instead of doing additional investigation to see if just maybe, they're the types who are wrong. A Must Browse For All Parents Before Vaccinating Your Child This is a MUST for every parent - especially ones questioning vaccines and their safety. Do your personal research and make informed choices. I would recommend it to every parent and anyone going into the medical job! Will become recommending to friends! I really like that each of the 400 research studies presented includes a one page overview and, thus, does not overwhelm the reader. After reading the reserve I fell I could speak intelligently on the vaccine concern using peer-reviewed studies without needing to dive into a year very long project of reading every study page by page. It really is crazy that us parents have to do the research to stay up to date on science that pediatricians ought to be doing., if desired. An excellent resource. 5 stars! I desire this book had been available greater than a 10 years ago, BEFORE I thought the market half-truths about the security of vaccines.. It's very comprehensive, educational, and honest..
