I was disappointed at the lack of basic first aid directions as a friend suggested. My 1-Superstar review is basically because this book appears to be looking to get sales based on the similarity of its title to the useful 'Where there is no Doctor.' Please don't purchase this book thinking you are buying that publication, as we mistakenly did.. I am pleased with this book as it is a 'hands on' instruction type reference instruction in a number of topics. Amazon. There's about three pages of useful details in this book, a couple of useful checklists and a recommendation to take a first aid class at the Red Cross. This is great for a list of medical needs and also . The one about prisons typically refers to third world prisons and contains many useful issues that can be utilized locally if systems and infrastructures fail.. I am not really the kind of person who leaves obnoxious testimonials but this time I am building an exception. That is great for a list of first aid requirements and also a list of basic first responder products. **DO NOT BUY THIS BOOK** Wast of money barely even touched on medicine or medical mostly discussed Global warming ?? Please We payed for a first aid reserve not some crappys Authors Opinion on global complications don't buy this book Just what a Waste of Money I purchased this book expecting to come across some useful information regarding handling medical emergencies when there is no doctor about. This is simply not 'Where There is no Doctor' Others have commented on the lack of meaningful content thus I'll refer you to those reviews. Put together an initial aid kit. The title was just as well similar to a more helpful publication. What I needed was steps to make do during a crisis when there isn't access to a Dr or a stocked ambulance. Seriously? This book is filled with ideas on enabling you to head to get trained or educated in basic medical. I was really hoping that this book will be a handbook for us to use in case of a serious crisis. I am about 3/4 the way through and am tossing it in to the Goodwill pile. So far I have "discovered" that we have to keep healthful, brush and floss our tooth, cover our faces correctly whenever we cough and sneeze, & most importantly, we need to clean our hands frequently. Then I realized this is simply not the book that they had recommended me to buy. If we must cope with the dead, we have to place them in a big plastic material bag and record the loss of life for the **AUTHORITIES** later (don't forget to label the inside of the handbag with the info!). Lots of poop? Wasted Time If you're thinking about abilities or knowledge this is simply not the book. Boy what a mistake that was! To think I had been kicking myself for postponing this purchase makes me laugh now that I've read it. Level Headed Approach, Great Read This is simply not a survival manual nonetheless it is a level headed, realistic and balanced approach to situations when there could be no access to health care during some major event. There are several lists to assist in building medical kits, ideas for available free resources such as for example on-line downloads like the Coast Guard "Standards of Training Certification watching Keeping for Seamen" and the ICRC (International Committee of the Red Cross) "Water, Sanitation, Hygiene and Habitat in Prisons". These resources are best for when medical help is not readily available.. This book is exactly what I wanted. Therefore I have picked a couple of areas that I will focus on and become prepared for. Not wanting to depend on neighbors or community, my choice would be to look in immediate family, if we each acquire separate products and skill sets I feel we will be fairly well prepared. Which means this book indeed was a good one for me because it helped me to see that I may have to rely on others such as family members, neighbors or my community to fill in those medical skills that I do not have, especially for an extended term event. I will specialize in PPE (Personal Protective Devices) and basic first aid. Five Stars as described. Just what I wanted I sail, and sometimes you can find circumstances where you will need medical treatment and there's literally no way to get to a health care provider. This book addresses the medical assistance and preparation I needed. It generally does not go so deep as to be complicated, but it does give some very good advice to those that anticipate the need for medical help kilometers from civilization. I have some knowledge of medicine (I am a registered nurse), and I wanted a thing that would cover a lot more than the fundamentals. This book made me aware that I can't cover all possibilities and that I do not have all the skill sets to be all things in the face of disaster. What good does that do me

when say, a friend can be bleeding post disaster no ambulance is coming? There you go, today you don't have to buy the reserve.com/Where-There-No-Doctor-Handbook/dp/0942364155/Purchase it instead IMO. Besides that, it's is normally a bunk of general details and observations that any junior senior high school child could have written of the very best of his/her mind for a health course assignment. Gee, Thanks. Do not waste your money!! Interesting and valuable read. You will discover that excellent work here: <https://www.> You can keep it as such AFTER reading it thoroughly. What I appreciate is usually how this MD is quite supportive without having to be an alarmist by explaining that it is not really a matter of IF but a matter of WHEN some type of major emergency will take place and there isn't a doctor around. create a latrine. Maybe the thing this book succeeds at is telling you to purchase information you thought would be in this book. I like the publication and I like the balanced approach. arrived quickly Five Stars It's a book. Purchaser beware indeed... Five Stars absolutely invaluable Can't be too prepared for a crisis It's ok. I think I knew lots of this material already. It's not a first aid guide. Great Teavel Companion Great medical book for those of us who like to travel, safari, and camp where you can find zero medical facilities within easy reach.
