if i just read this before i had babies! God wins everytime! I gave Lyme disease to my kids unknowingly in the womb, thanks medical program for no telling people Lyme can be an std and exceeded in the placenta and breast milk! But eventually aren't we likely to post to those He provides placed in authority? MUST READ! Share with all your wannabe mothers or expecting, heck give everyone. wake up globe. I get where in fact the author is via, but I feel like it is too severe and judgmental. A definite must on your own list of parenting books. I did understand some but this book, sheds a light on holistic treatment and organic birth for mom and child. I wish I knew all this details before I experienced my first child. Also healthy eating habits as far as eating entire organic food and protecting our kids from toxins prevalent in our environment today. For this reason book I have found a family group chiropractor and our entire family members will be getting modified regularly. I would have made a few different decisions experienced I read this book prior to having children. Wow want I had the opportunity to learn this book years ago Everyone who is planning on having children need to read this book. My son and child in law borrowed this book if you ask me to learn and I am thankful they did. I would suggest this reserve to all families. devil in the detail I was suspicious approximately the reviews, because 3 of them are from the same person, Greg Kennard. More amazing is the way the U.S. compares to other countries in infant mortality rates. book are very solid and they make one feel like unless you parent like them The views in this book are very strong and they make one feel like if you don't parent like them, you do it wrong. I asked him why, and he stated that he previously a middle ear disease, and that he didn't consider any antibiotics at that time. Even just understanding how the traditional hospital birth technique make birthing more difficult... Most sensible thing parents to become can do because of their baby is be educated and know their rights. Things that are completed for the convenience and the convenience of the doctor and or hospital rather than what is best for the mom and baby.how small changes could eliminate many c-sections. Still well worth a read after you have had children I enjoy a reserve that resonates with my beliefs and Baby; created by God is a modern no nonsense look at of parenting that assumes many of the problems and issues and confusion of modern parenting and clarifies them with an eloquence. I've had 5 kids and have faced most of the many modern 'ways' of parenting while internally feeling that my intuition as a mother was been stepped on by medical doctors, other parents fears and old ,well meaning and fallible guidance. This book will re-enforce your God given intuition as a parent and refresh your well worn parenting ears. Have cardiovascular, this book is a lovely read. People live therefore a lot longer than they utilized to due to advancements in medicine..! The price difference between a vaginal birth and a c-section and utilizing a midwife. Trust in God if you want, but take action responsibly as a parent, and benefit from modern medicine which makes childbirth and raising children almost trouble-free nowadays.!. This is an excellent resource for expecting and new parents. I loved this book very informative. As a fresh mom, my husband and I try to parent similarly. As a result we've a beautiful, happy, and healthy 15 month old. We listen to our innate and let our child grow up with the least intervention as possible. Five Stars Good advice! This book is a superb read tells the truth from the minority part!! With all the current Fear-based baby books out there that is a comfort to all or any new parents. Finally, someone wrote a reserve with the natural approaches to health for baby and family members! I recommend this publication to all my very own patients.-Dr Boles Great for new parents and people curious about true health Incredible read by some amazing people. but the devil would love this book. Not for everyone I feel like the title is misleading and it was not at all what I expected. Awesome book! Definitely not for me at least. It is amazing what hospitals/doctors neglect to share with you. Strangely, all the

positive reviews are a comparable length, gushy and incredibly superficial, while the negative reviews are all intensive and well argued. You can almost think folks have been put up to advertising the book! The reserve itself is normally a simplistic, misleading, often fake and onesided watch of a very complex topic. Let me just say this. I used to instruct in a Waldorf (Steiner) college in Germany. These parents are notorious for not really immunizing their kids, not visiting pediatricians if they should, rather than letting their children take antibiotics. They're spreading so much false information. The number of unnecessary c-sections often caused by other medical decisions. The illness got very much worse and he ended up losing the hearing in his right ear. Great Book! The physician or pediatrician isn't the devil. Great for new parents and people curious about true health. Books like this do more harm than good Books such as this do more harm than good. One boy I taught always leaned left when I talked to him. How about parents who pray through their child's illness and the kid dies? It's totally arrogant to think you know much better than the experts perform. I am a Christian and I know that God offered us doctors to greatly help us when we are unwell, injured, etc. My husband, kids and I all observe Christian doctors! They truly became doctors out of compassion for others, not for the almighty dollar. . Women and infants utilized to die during childbirth because we didn't understand then what we do right now. How can they claim to learn even more/better than doctors who go to school for a long time? Are they supposed to believe they didn't have enough faith? Occasionally God gives us options and also have to pray through them for Him to give us wisdom about what to do. Quit believing the lies they reveal they just want your \$\$\$\$.
