

A photograph of a construction site at night. In the foreground, several orange traffic cones are placed on a dark, wet surface, possibly a road or driveway. In the background, there are construction vehicles, including what appears to be a backhoe loader, and some construction equipment. The scene is illuminated by artificial lights, creating a high-contrast, somewhat blurry image. The overall tone is dark and industrial.

It isn't a Prepper's help to the end of the world, but instead an everybody's lead to being ready in case of real world emergencies such as a snowstorm, hurricane, tornado or flood. Of course, those people are also probably a lot more than happy to sell you that meals and charge you to install that bunker. With just a little knowledge and some basic planning, you can be ready for the kind of disasters that happen all over on a regular basis. The objective of this book is simply to provide you with some basic "common sense" survival techniques to help you be more prepared in the event of a disaster than you might currently be. Some people want you to believe that you need freeze dried prepackage food which will last 100 years and a zombie proof underground bunker in your backyard for you to be equipped for a disaster. For those who have a family, or reside in a home, or breathe, well then one day, you merely might need this reserve. And on that time, the superstores will end up being closed, the food markets will be closed, the greasy clowns will end up being shut...and if they're not, also if all those places are in some way still open, you merely might not be able to reach them. Because whether it's the end of the world, or just the storm of the decade, sooner or later you will definitely have a day that is just not likely to be normal. The simple, conversational tone of the writing, the use of everyday materials that won't need to be found at a survival store, or ordered off of the internet and having less digging zombie-evidence shelters make it a publication for the less paranoid among us. This book is a plain language, common sense, everyday approach to being ready for a real world disaster. It isn't to give you guidelines on surviving a specific type of disaster. It really is strictly a book about being prepared to survive the consequences common to many disaster scenarios, such as for example not having usage of water and food, living without public utilities for a period of time, and holding out on your own until either civilization is certainly restored or you can be rescued and transferred to a safer place.
