I would haven't known! People who have provided Shelley negative testimonials probably work for the vaccine industry and have no idea or a clue on how to raise a child with autism. She spoke of issues that my children were experiencing who DIDN'T have a diagnosis. One particularly struggled with vision, had trouble with attention span and struggled with composing. Some stated she was simply lazy, I knew there had to be an underlying trigger. She learned to read late but cherished reading and was frustrated at her inability to create correctly. Just what I needed, this publication was a straightforward read, directly to the point and easy to understand. Good, practical -filled with insights Filled with courses for assisting children- from understanding a child upon the spectrum to advocating upon the education path and how exactly to maintain good parent and family health. The author explains that there are numerous ways that dyslexia presents in children. I'd have NEVER thought to study or seek resources to greatly help her with issues if it hadn't been for this book. Love how you formatted your reserve, yes I agree less straining on the eyes, on my eyes, that is 100 % pure genius and brilliant, many thanks. Pure pseudo technology and thinly veiled hatred towards special needs children... Terrible book. I've studied and researched many details that are just shocking and are not told to us by Doctors. Terrible book. Please browse the vaccine inserts. I've spoken to pro vaxxers and so far many of them have not really read the vaccine inserts. Clean vaccines usually do not exist in the US because the adjuvants that are added contribute to the body producing anti-bodies. Nevertheless, vaccine immunity wears off over time. I also discovered that in modern countries, as time passes diseases naturally fade away. All of the charts have actually shown this to be true even for diseases like Scarlet Fever that never had a vaccine. The danger of vaccines is not with injecting a half lifeless virus. Shelley Tzorfas reserve is just what the physician ordered! The vaccine sector refers to this because the dirty little top secret. Thank you Shelley because of this incredible book that will assist many families to create important decisions which will protect their children and recover and heal them.. empowering steps to help our children regain their health in addition to prevent future problems for the generations to come. I possibly could hardly put it down. The danger is with all of the toxic adjuvants that move directly into the blood stream. She provides thorough knowledge regarding how vaccines and antibiotics are main culprits of these disorders - and then offers useful remedies for detoxifying and reclaiming our children's health. Shelley is a welcome tone of voice in a society that is sadly focused on profit at the expense of our children's - and ultimately our households - well-being. She does not leave a stone unturned and with great insight and trusted resources, reveals numerous erroneous findings about the causes and supposed remedies for Autism, ADHD and other special needs, while at the same time giving healthy and life-helping alternatives to developing a thriving life experience for our children.
