Wow We've been wanting to learn about soap making for a long time. I've read several books and found that one to be probably the most thorough, yet really easy to follow. I am so happy I stumbled across this book. Thank you so much for taking the hesitancy aside. This book is an amazing resource tool. We made Wheat Grass w Spearmint & I was surprised how easy it really is and the dishes given by the author are actually nice. I am planning to modify my recipe to come close to There is a typo mistake, though, in that the lye for the shaving soap recipe appears off. Soaping is addictive! 82 g, which is too far off; :) Fantastic book! It could be nice to learn what the soap actually looks like before making it. I like this book. Also offers suggestions for how exactly to bundle your soap. Another thing may be the recipe for spiced pumpkin (I am quite thinking about it as the soap will be shaded naturally by the pumpkin, and We am looking towards making fall-themed soaps in the following weeks).. need to use your imagination for that too. You can find precious few photos throughout the book, and they are all dark and white and uninteresting. I gave this 3 stars because it does provide you several soap recipes. Five Stars Good, basic beginner book. I made a few loaves of soap with Ms. Beginners need photos. Great reference for a newbie like me; however.. Things just don't appear right to me I would like to say in advance that I'm a fresh soap maker. Recipe section can be good. I have learned through trial and error using my own recipes I formulated using soapcalc after reading several books (I rarely work with a recipe in the books). A definite error was insulating my soap loaf (or specific bar molds) after pouring, not really recognizing that milk proteins and warmth = browning. Not so! It is easy to read and the guidelines are easy to adhere to, and I discover the quality recipes interesting, particularly that the author makes use of not merely distilled drinking water, but also coconut milk, goat's milk, and pureed veggies. I likewise have been searching for dishes for shaving soap with bentonite clay, which one has it, with the recipe becoming quite close in the substances I used in my very own shaving soap (without the bentonite clay) that my husband loves. Cedarwood essential oils. I ran the substances in the lye calculator, and I am getting 344. Great Book. On to the next batch! it could be a lye-heavy shaving soap). I'd have appreciated the dishes better if the author included the percentages aswell, including the superfat percentage, and the lye focus.. I enjoy learn new things and this is definitely something that I must say i want to learn more about. Although right now I have a fairly good notion of what temps function best for my soap making, it is reassuring to see the temps the author emphasizes for the recipes. I thought I'd have to follow other people's recipes any period I wanted to make soap. I also like this she gives instructions for swirling, etc. I want to make my own soap, but first I needed to study concerning this, to be informed approximately the safety, to have some recipes in the beginning. I cannot touch upon the HP procedure, as I've no interest to make HP soaps (will

simply turn my milk soaps too dark brown).....BUT, when I browse these recipes and they just don't make sense to me. I don't understand how you can use therefore many grams of oils and end up getting what the directions say is a 1 1/2 pound loaf of soap. After all if you are using 3 pounds of waters and oils (or even more)....how on earth do you wind up with such a little loaf. It has produced me afraid to try the quality recipes. I do have a scale to convert from ozs to grams... Book is Okay. This is not a book I would recommend for a beginner at all. Filled with Advice, Tools and Guidelines I had never found out about using a soap/lye calculator to create my own recipes until I purchased this book. I am not that stringent, but I do aim for minimal adjustments in temp during saponification and minimal distinctions between the essential oil temp and milk (buttermilk, yogurt) temps through the mixing, because I am scared for my soaps to turn too brown. This publication has that emphasized early on. I followed the guidelines in this book and utilized an online soap/lye calculator to create my very own recipe, and my soap came out perfect the very first time! My boy and I made a batch each and discovered it very easy to follow. There are the necessary safety precautions to check out so that nobody gets hurt. There are breakdowns of different oils/butters and their particular properties so you know if you're choosing a cleansing oil or a moisturizing essential oil or an essential oil that will make a solid lather. There are sample recipes to make use of as is or even to modify if you want to make your very own recipe. Appreciated a lot more when I got eventually to the last web page and saw that doTerra natural oils are Summers favored oils. Thank you, Summer! Your book has completely changed just how I make soap! Photos please I desire this had photos of the soaps and the crafting included. If somebody really wants to make soap and does not have any idea how to do it - this is the perfect book to begin with. It covers everything essential that you need to know upon this topic. Eucalyptus essential oils and Activated Charcoal with Light Fir, Douglas Fir & Now we are able to make soap ourselves and give it as something special to our close friends for birthdays or additional events. Who can claim nowadays to obtain homemade soap as something special? This book is a fantastic read for all who want to learn the artwork of soap making easily. IMPRESSED! in various types of molds... I did so lots of researche in what publication to buy for. I didn't wish to spend money for some books, so I found an ideal book for me. In order to know how to produce your own soap, this reserve is amazing. It's very basic to read, the writer it's very accurate in everything. There are instructions on how best to make swirls, and embeds but you have to use your creativity because there is only 1 picture for that, and it's really black and white. Four Stars Lots of info not used to notion of soap making.73 g distilled water(writer has 260. Plenty of valuable information for a new perform it yourselfer. There is absolutely no amount talked about for the canned pumpkin puree. I want to stop using

chemical substances and getting ultimately more into natural ingredients. Four Stars Good directions Four Stars Good book. Four Stars like book needs photos!though I wish the reserve sold in the USA did already. I started building CP soaps last June, and have been using buttermilk or yogurt or tomato juice as my drinking water base. However, you can find no photos in this book. Barto's book and they all turned out properly, and it gave me the confidence to branch out into formulating my very own soap recipe. But if you are a visual learner, start with Heidi Corley Barto's book.
