many thanks! Simple techniques. Will not promise you to teach your child in a single day, but breaks up the procedure into smallest actions and gives advice for each, quite thorough. She was outgrowing diapers and bigger ones are very expensive. Took us 4 months, a lot of work charting when she removed, but finally the light continued for pee and another three months for poo. Potty Journey This book is incredible! But if that does not describe your child, then this book most likely isn't going to be as helpful for you either. Our child is day potty trained. This book was wonderful. It takes dedication, consistency, and perseverance, but the payoff is really worth it. I buy into the additional review, this book supports eliminating training and ideas to put child on potty which she did not like. We also earned tables, iPad, ate meals there after we tracked her moments bc she did not want to go. Again after four a few months the lightbulb went on. So worth the excess effort and time and lost summer. Much less helpful if ABA fails well with your kiddo. The Potty Trip is a book aimed towards helping parents of special needs kiddos work with their kiddos to achieving potty independence. Five Stars About to get started on the trip with my 4 season old non verbal Autistic Son! Our beautiful boy, who has a more complicated convergence of diagnoses, conditions, and syndromes, and is known as by most actions to be low working in many respects, had zero problem whatsoever determining the ABA methods were an effort to control his behavior. She was fully potty trained in just four weeks! So ABA strategies have limited usefulness with him, regardless of just how much he loves a specific motivator. The program was great, but we didn't work with a lot of the ideas. Therefore we found this book to possess limited usefulness for our particular situation. pretty much he has to be in the mood to cooperate with you regardless of what you're offering him or you get nothing.. I believe it could be much more useful to a family group with a kid who responds well to ABA. Book is simple and fast to learn. Great practical book. The ideas in this book caused success within days here! I had almost abandoned potty schooling my disabled daughter, however now she is almost totally trained! Great help. The book was recommended by my son's occupational therapist. It includes a lot of good advice. Our autistic girl was not educated at six, so six. 5 we tried this (review says at the very least it is possible to eliminate train a particular needs child over 4). I liked the charts that you can use to record progress. It is well written and well organized. He's not really autistic, but has various other special needs.. I think just being focused and lastly setting my mind to it and letting him know this is what we were doing caused the success. There are a great number of guidelines in the publication, though. She actually is not night time yet, but we have been so much closer and saving cash and grief. My grandson offers fragile X syndrome, and he does not have any interest in potty training at five-years older. This review is FOR HIM! Good, but mostly good sense. We bought this publication when my child was 4 yrs . old and still had no interest in going to the potty. Many thanks to the author. wonderful resource. Top researcher of this type. Must have for educators and households working on potty schooling with college students with disabilities. It offers great information, a great deal of suggestions, and charts for data. Invaluable. We struggled with potty training our special needs girl for a couple years. Five Stars It took some time to receive this publication. And boy, will he not like that. Of program may not work for all but after 7 months, we are so much closer to fully potty educated. The backbone of the method contained in this publication is ABA (used behavioral evaluation).!! She was 6 years old when we started using the techniques described in this book. It has been very useful for our granddaughter with cp. Potty Training. We have a special needs child and by using this as a guide line we are on our way to potty teaching my grandson. Great resource! Exceptional resource for teachers and parents. Especially helpful for children they are not trained by 3 years old and also have special needs.
